Automate Multi ENV AWS Infra Using Terraform

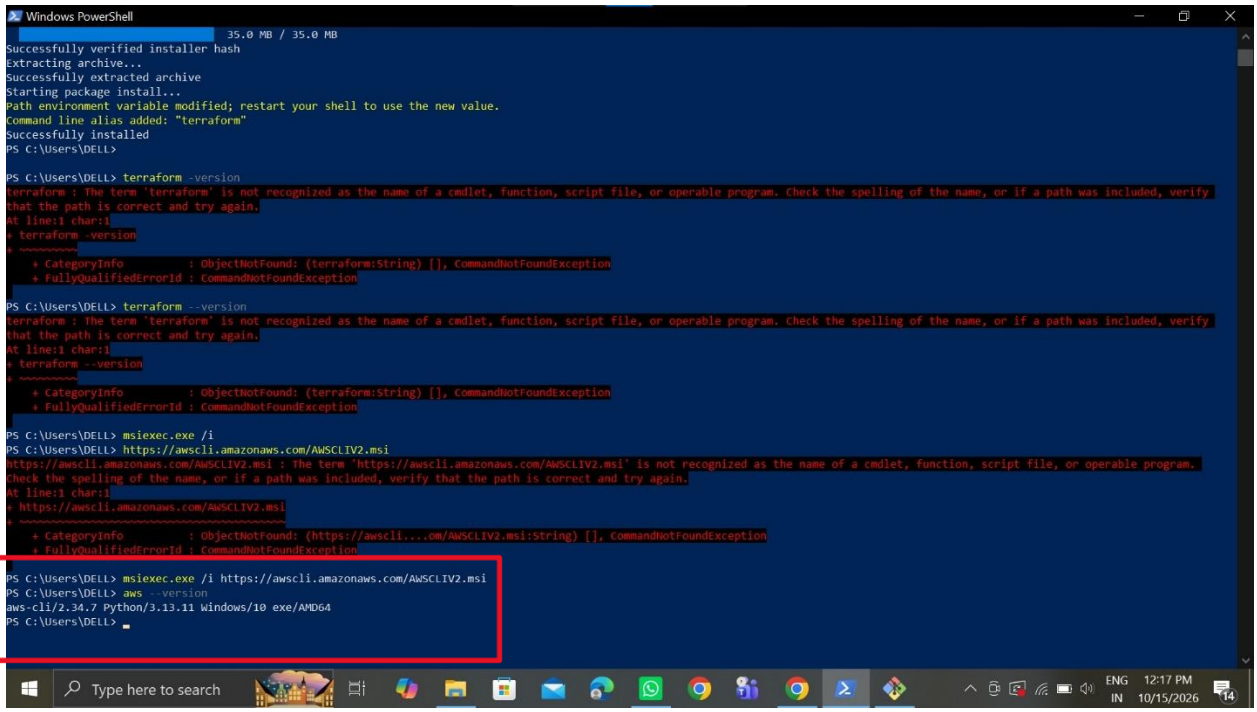

Install Terrafrom in Windows

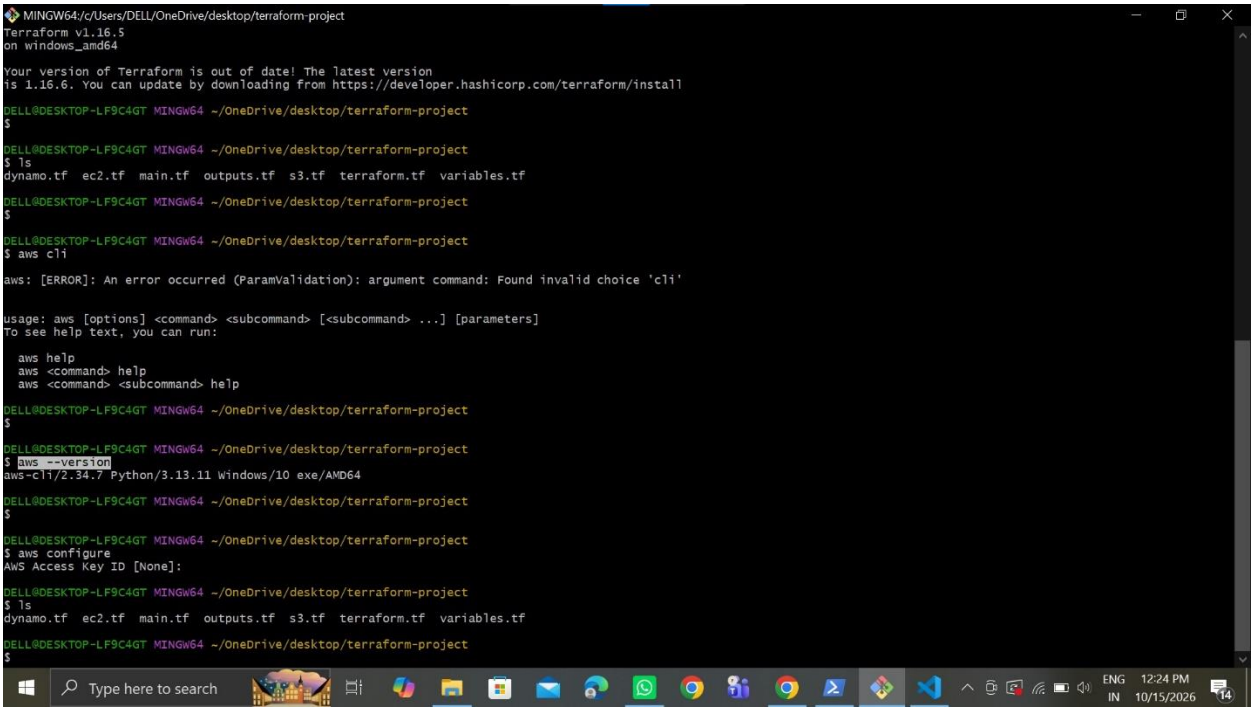

This Terraform Version Successfully show in Git Bash Terminal

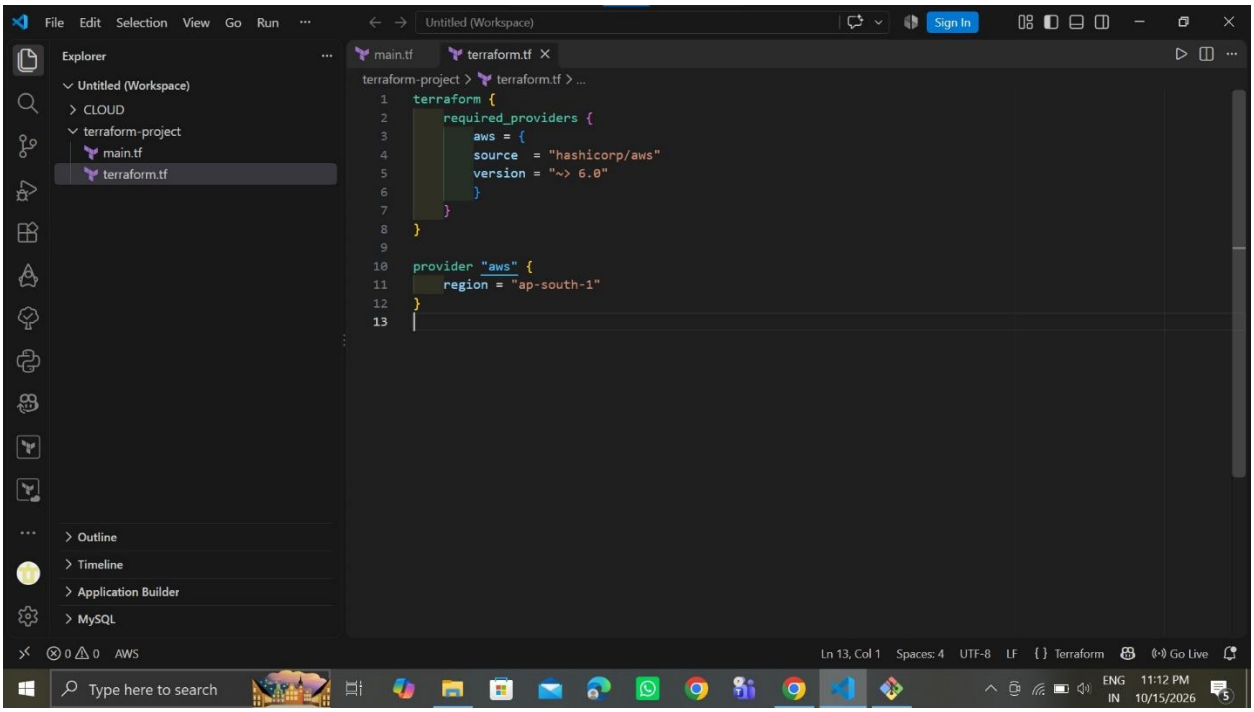

Install AWS CLI in Windows

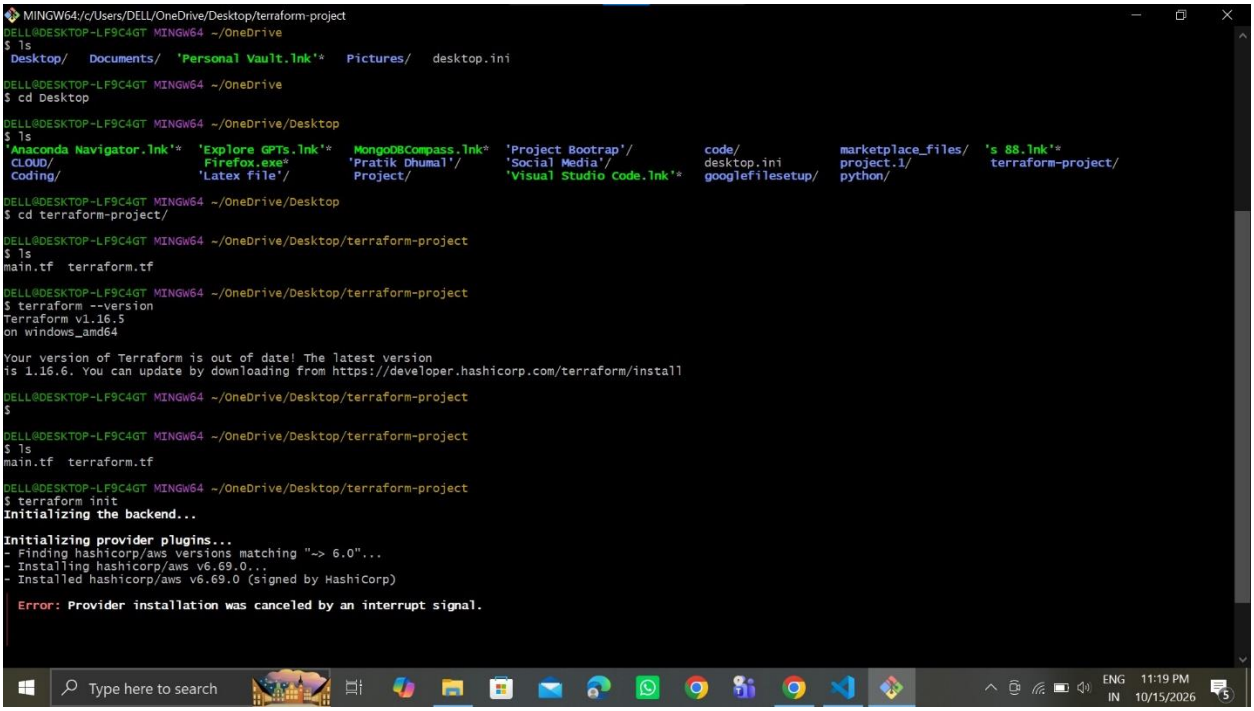

AWS version successfully show in Git Bash Terminal

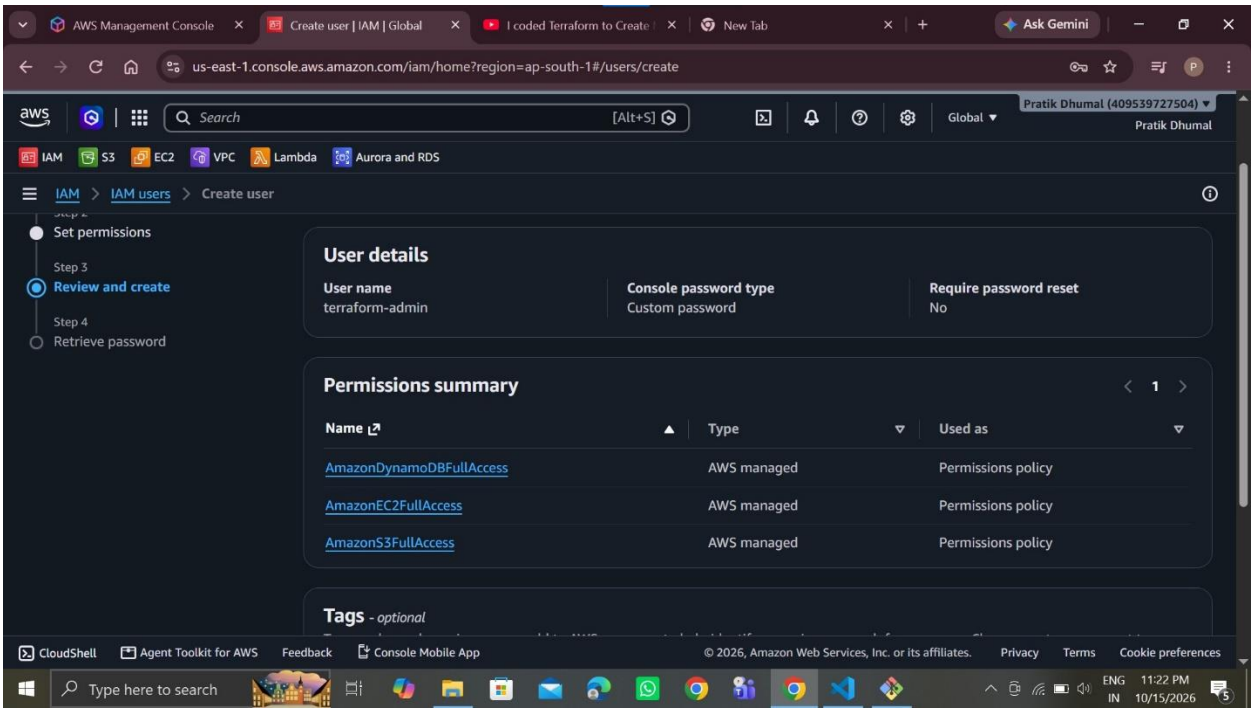

Terraform AWS Provider file

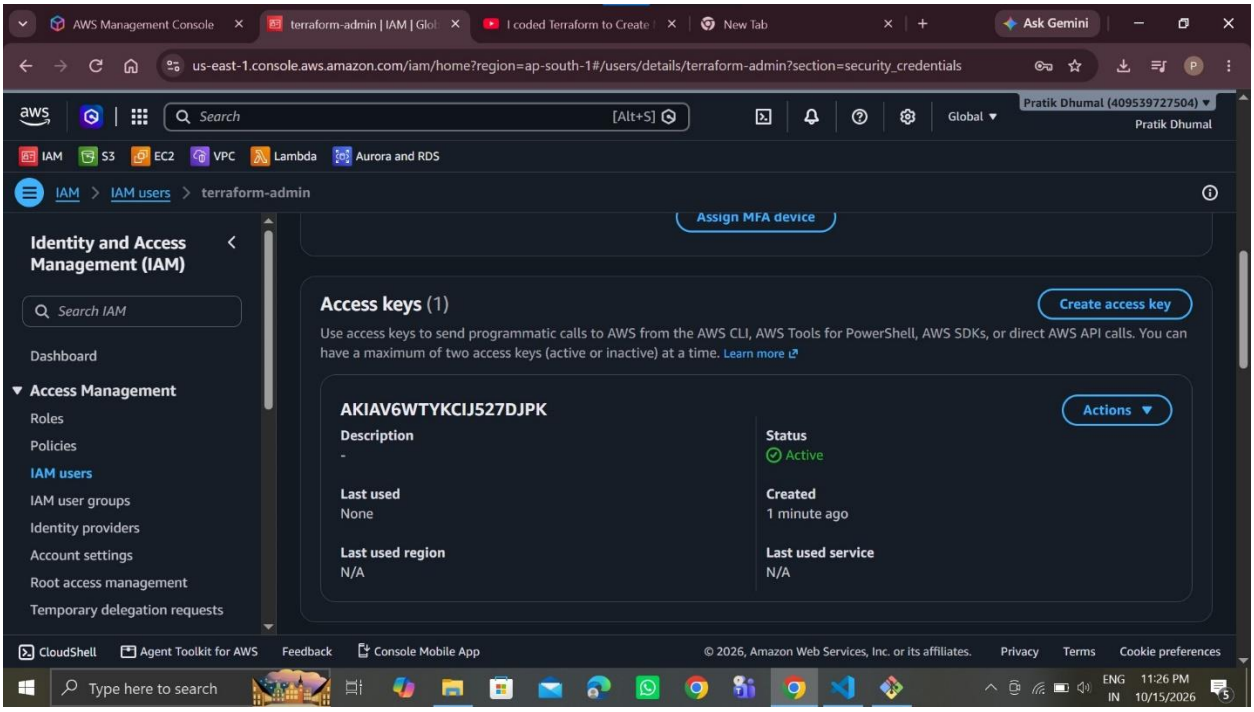

Then Terraform init , then show the error

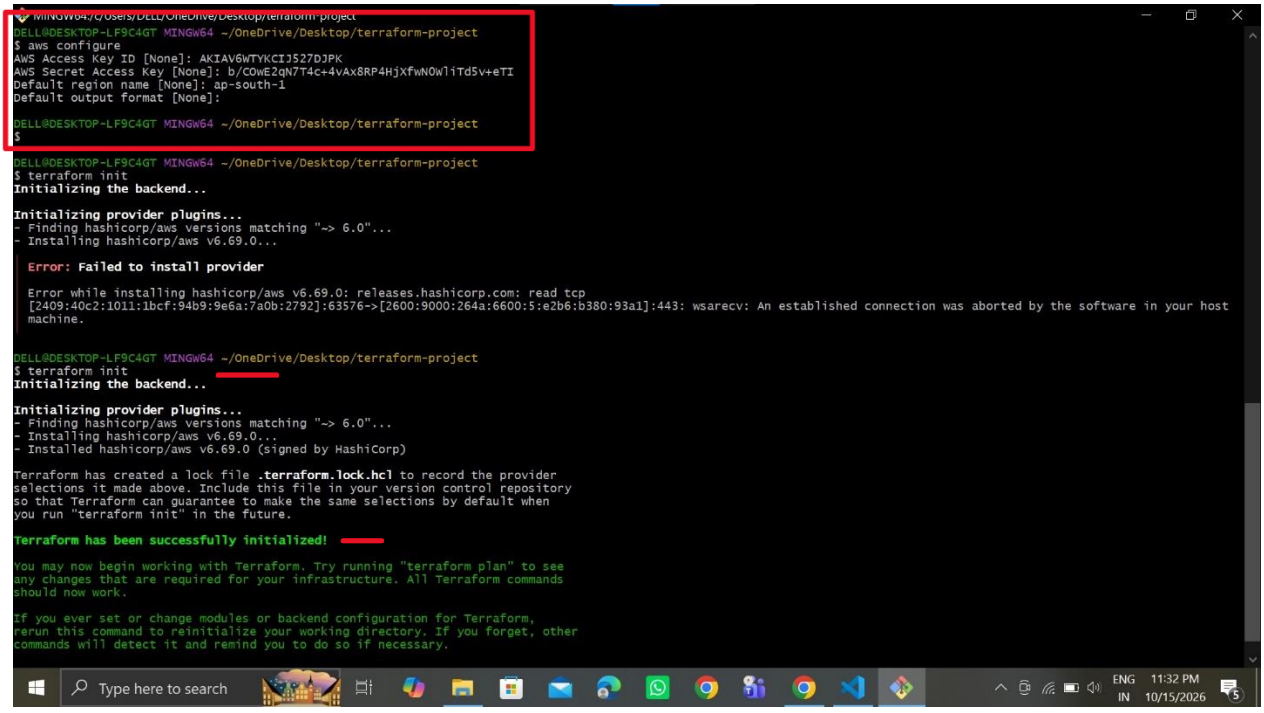

Then create IAM user and Set the permission

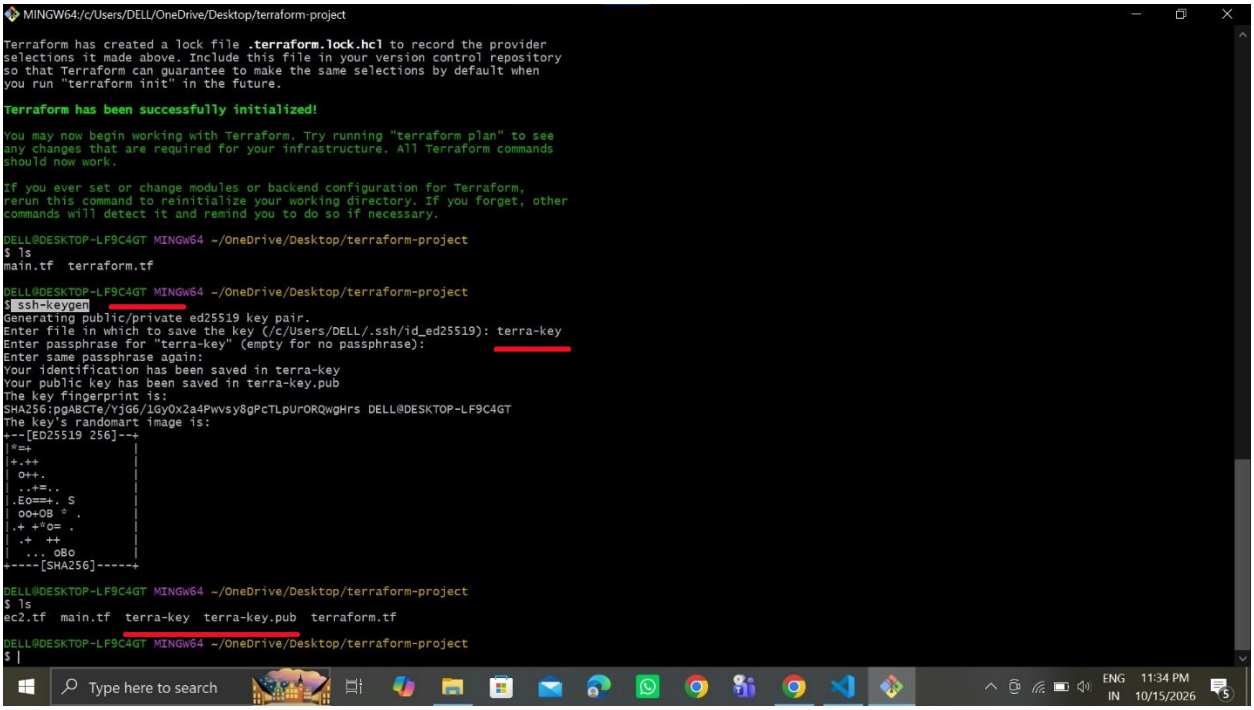

Then go to Security Credentials and create Access key

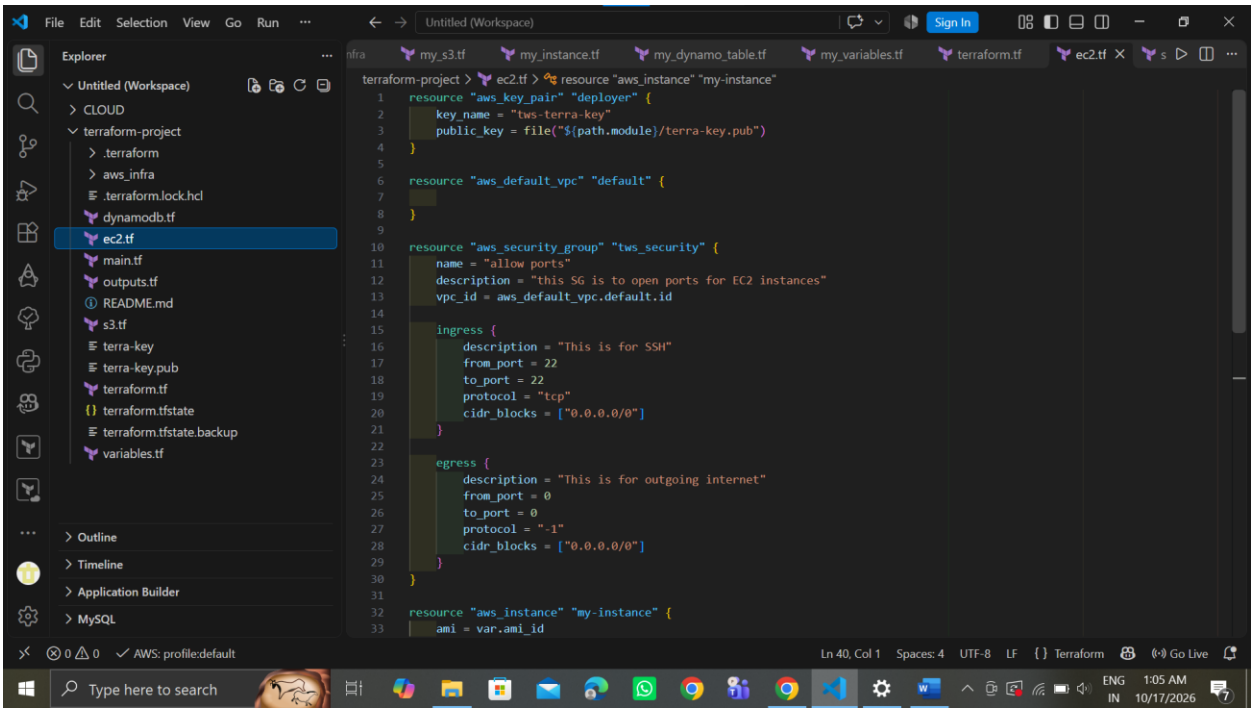

Then go to Git bash terminal and Configure the Access key & Secret Access key & then Terraform int

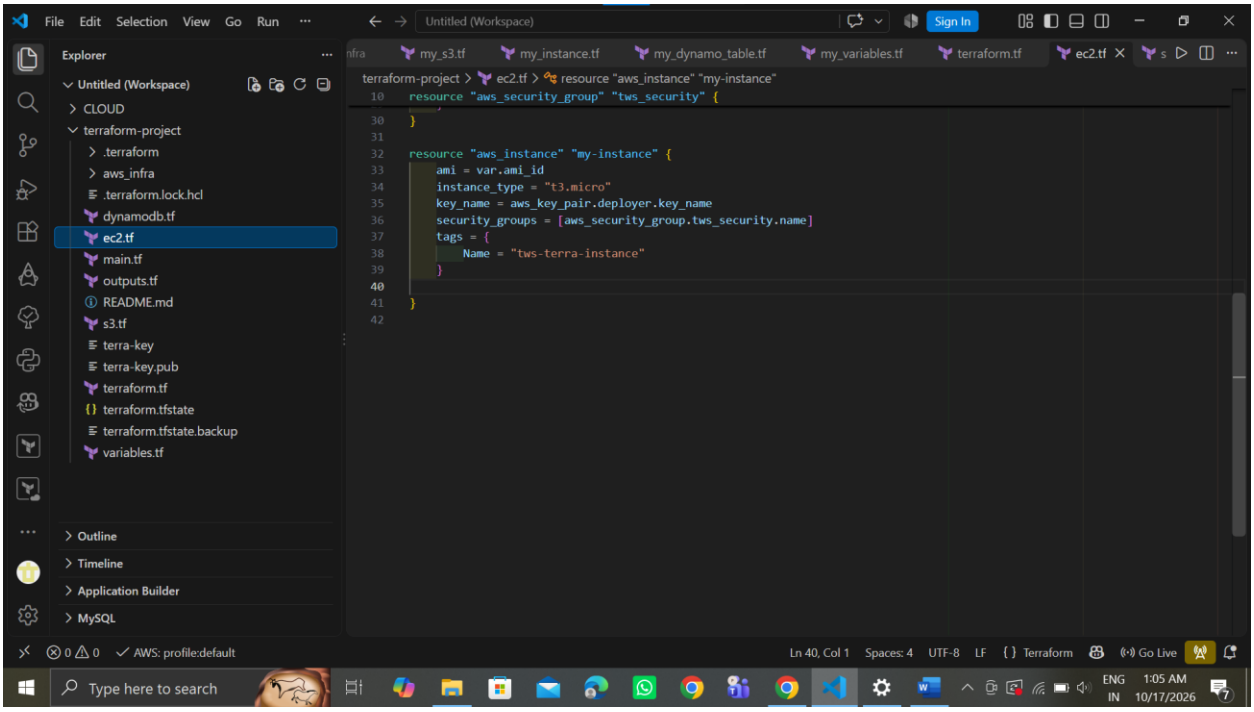

Then create Key pair

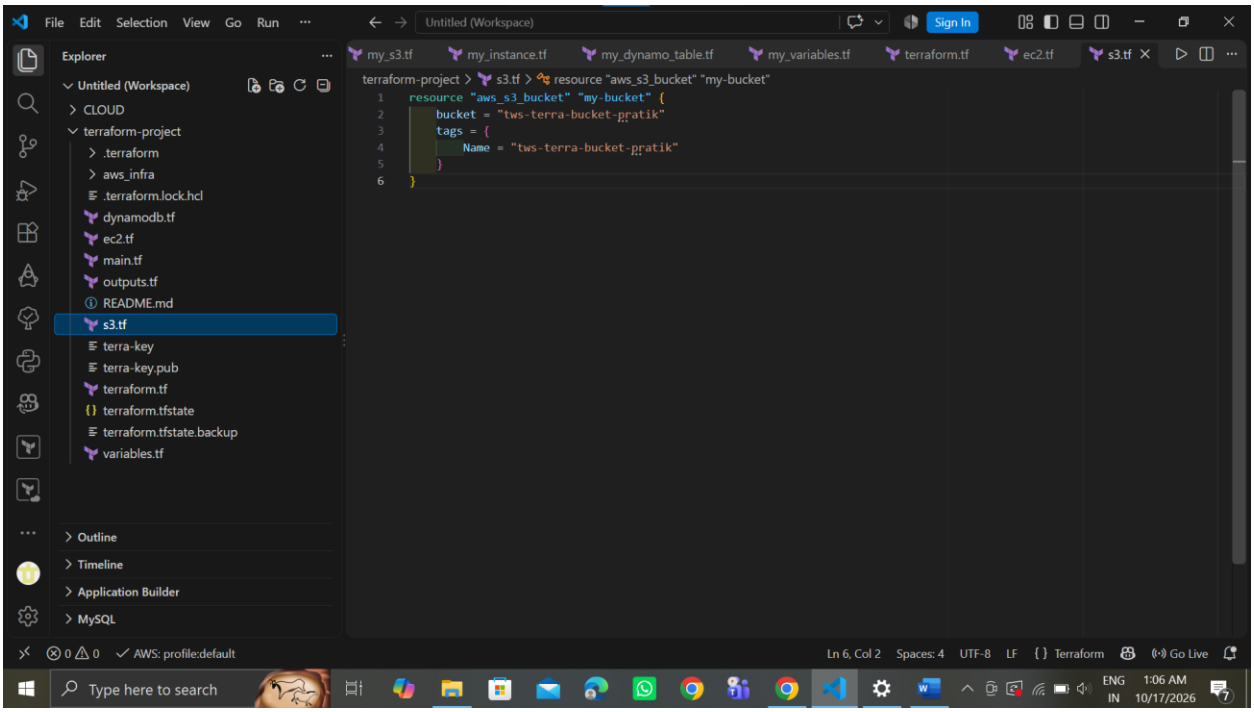

Ec2.tf file

S3.tf file

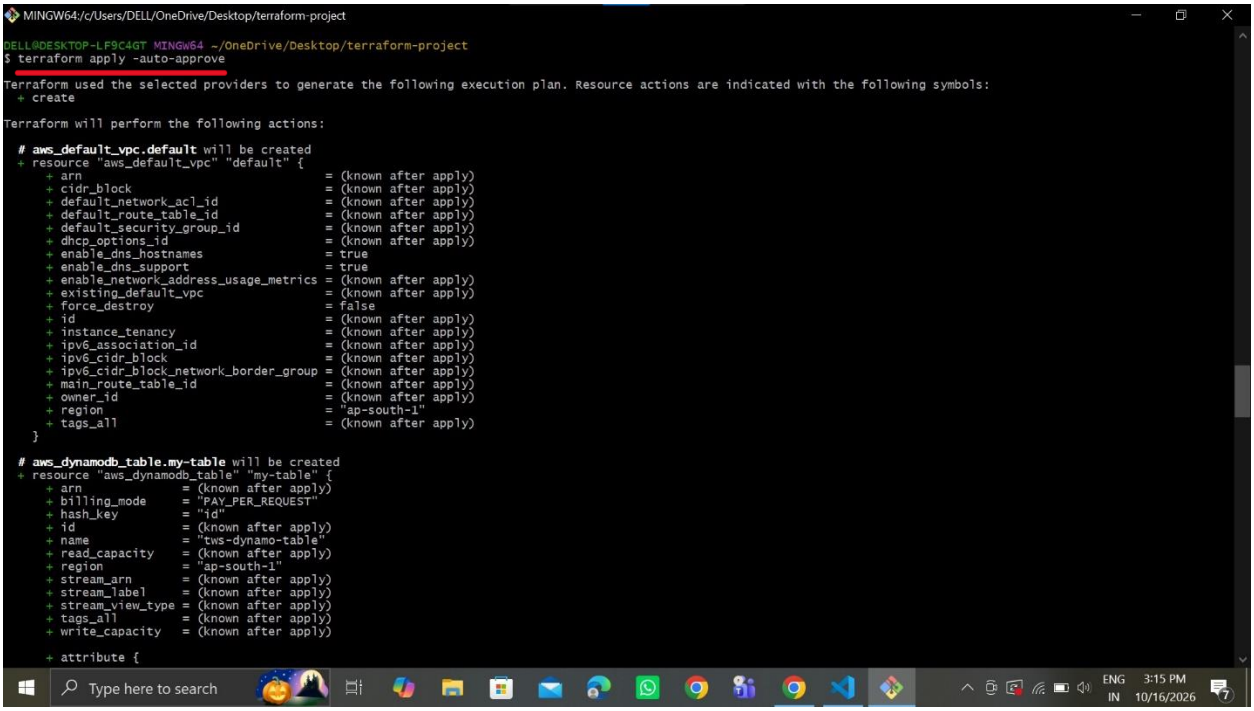

Dynamodb.tf file

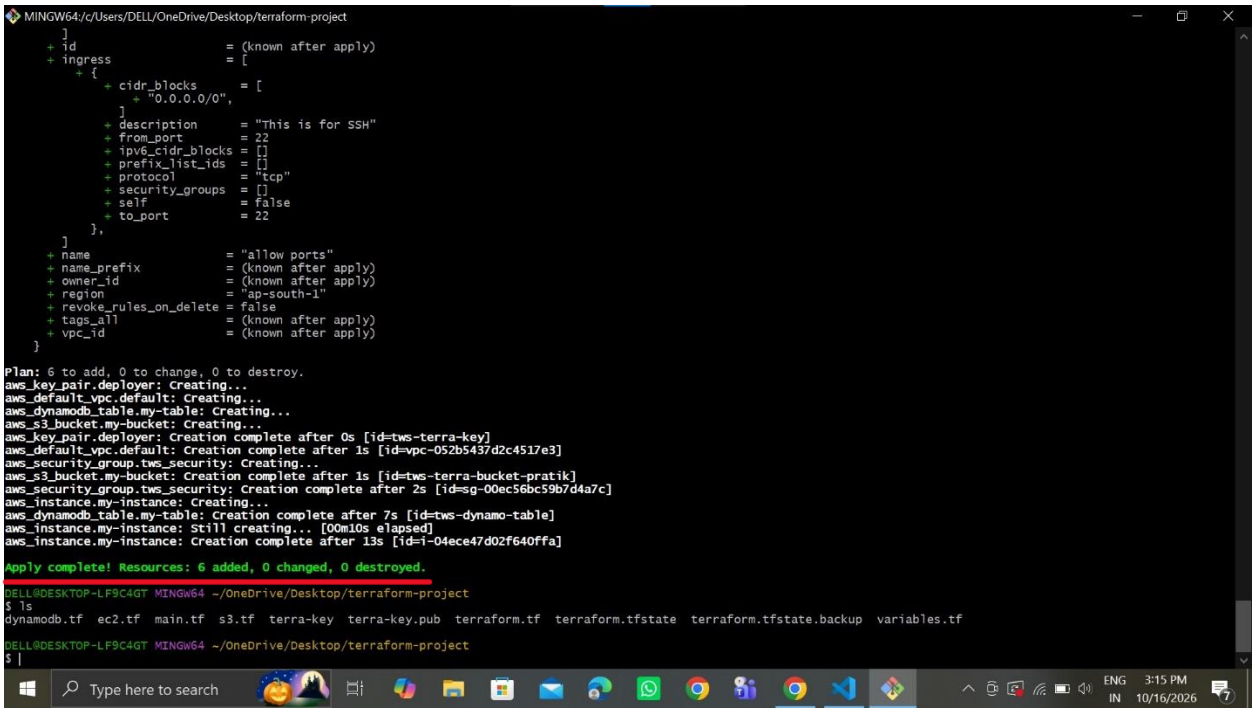

Variables.tf file

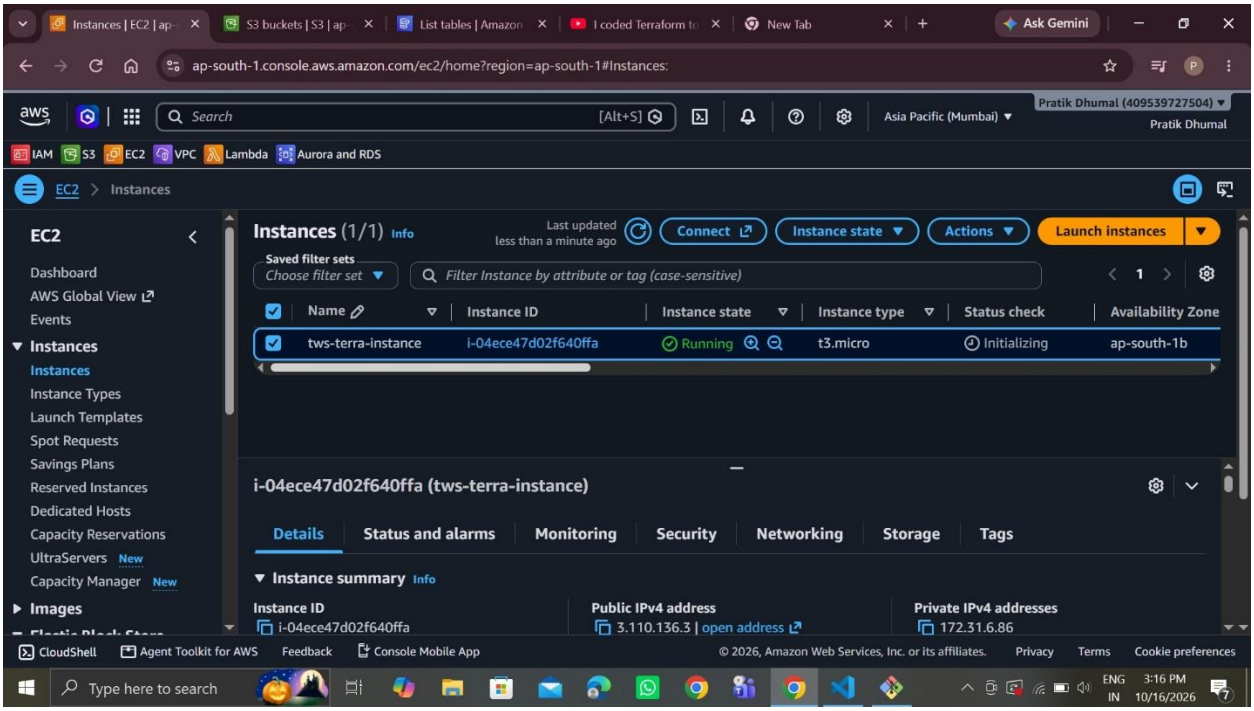

Then apply Terraform

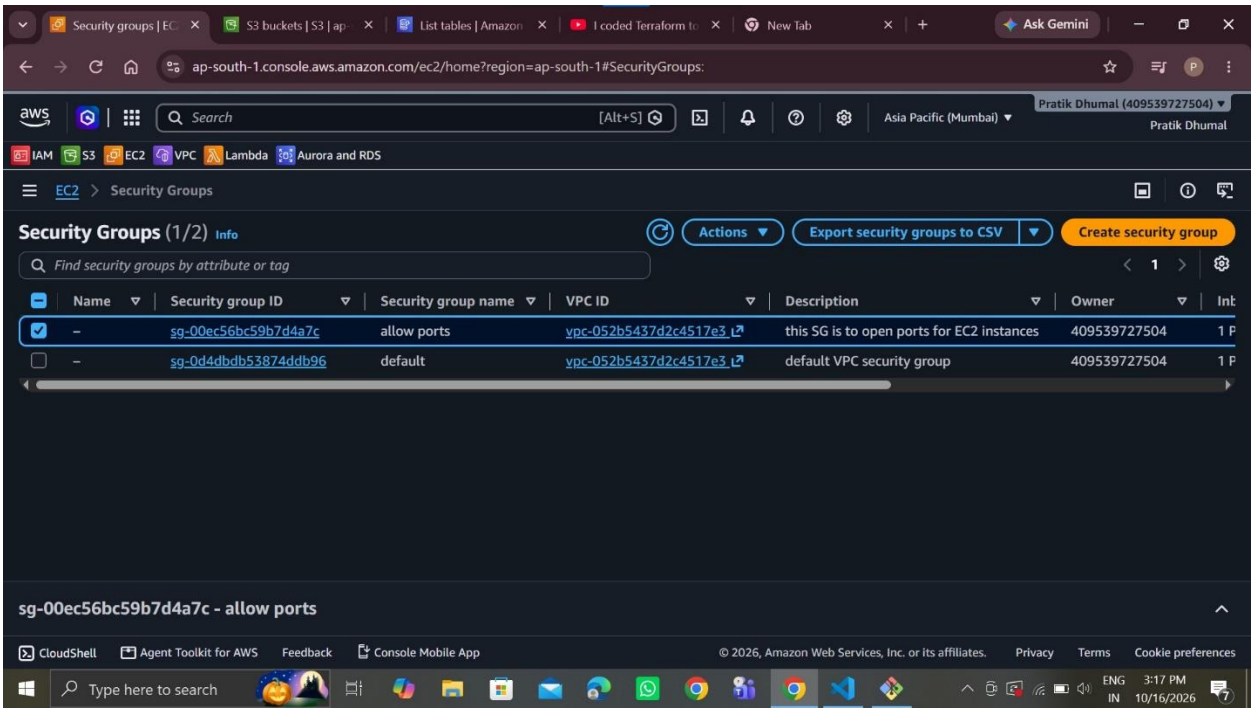

Successfully apply

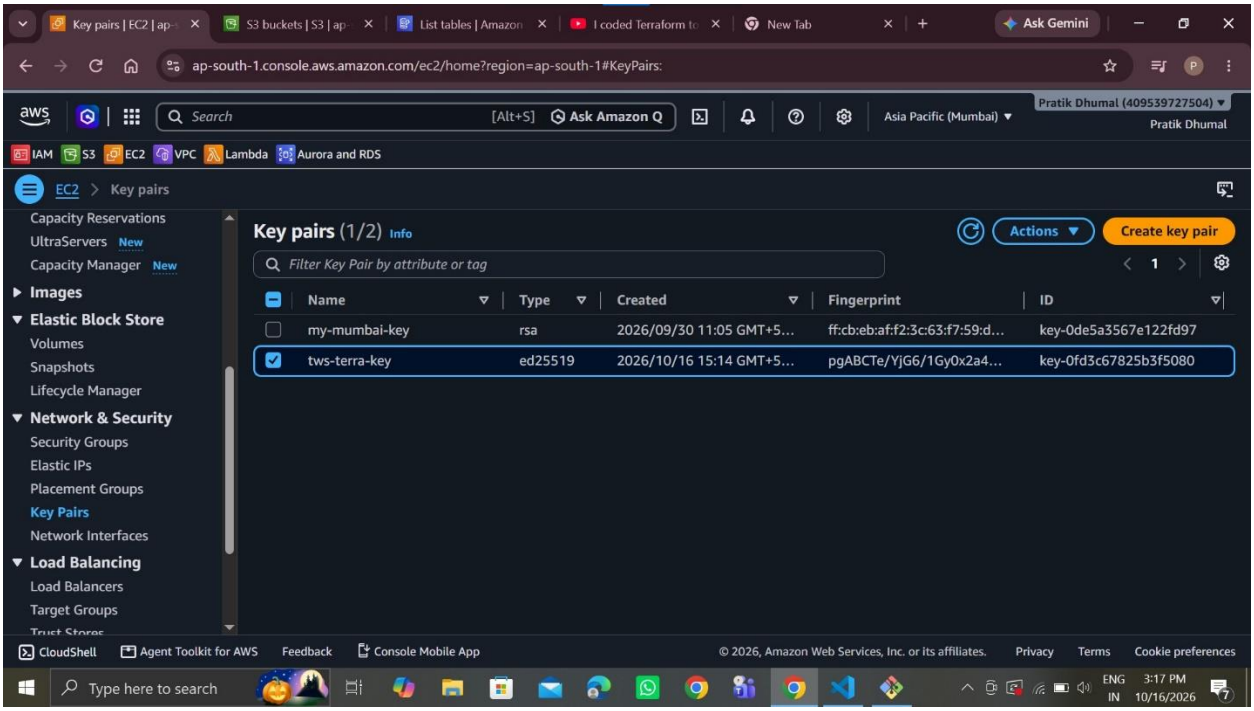

Ec2 instance successfully launch

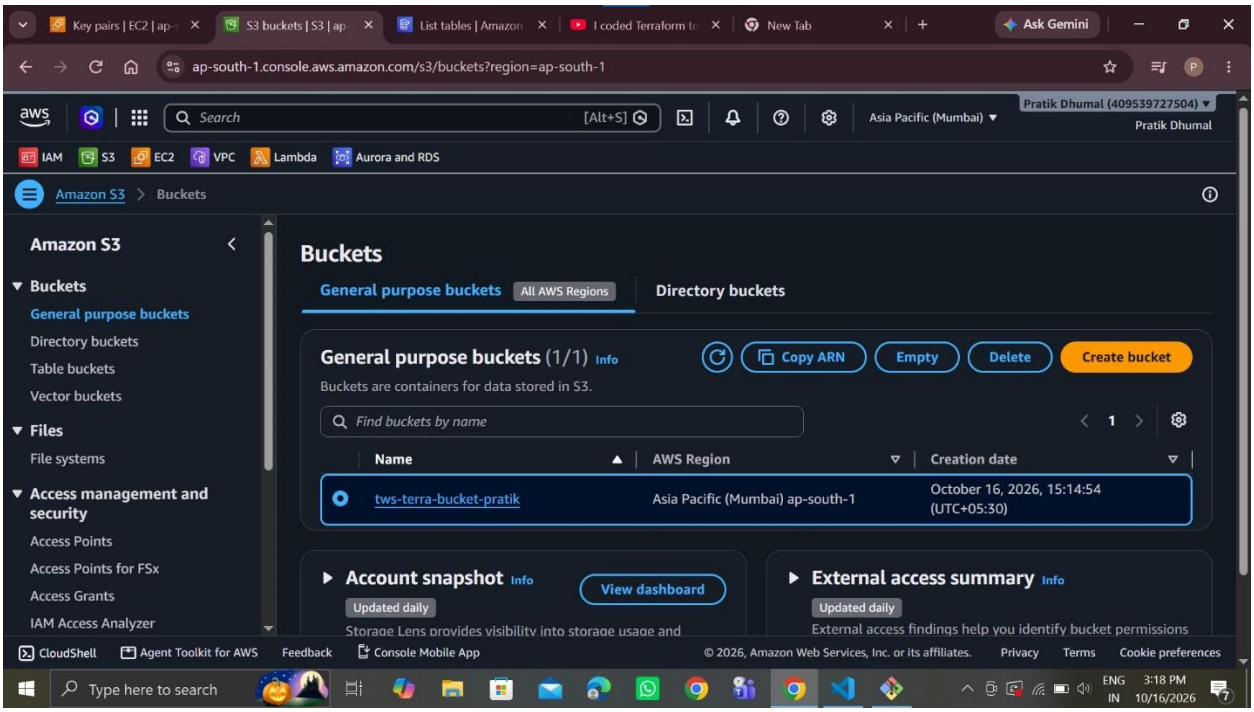

Security group created

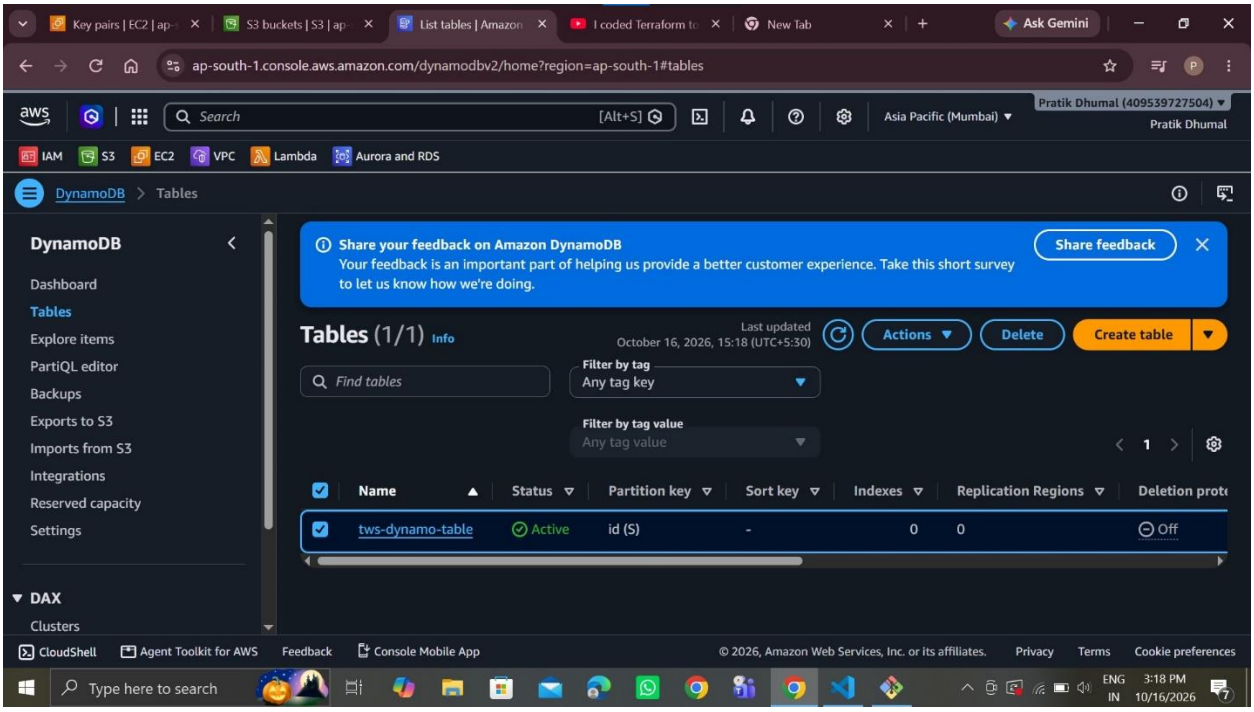

Key pair created

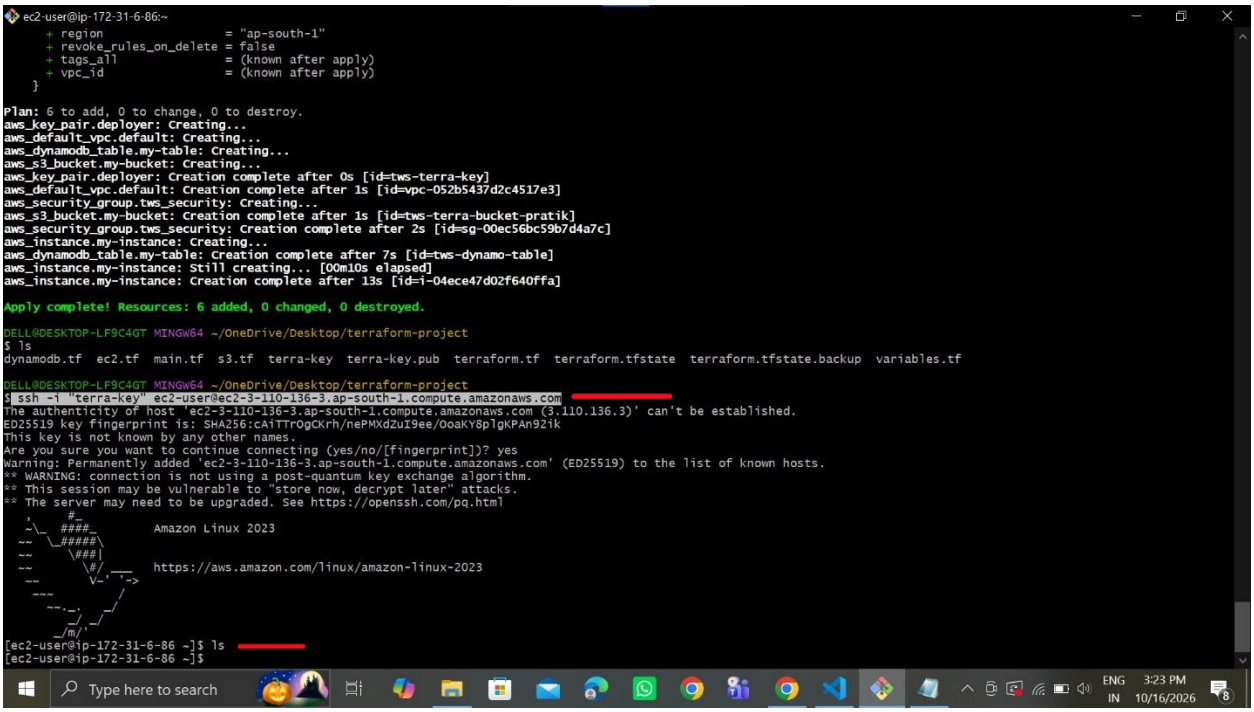

S3 bucket successfully create

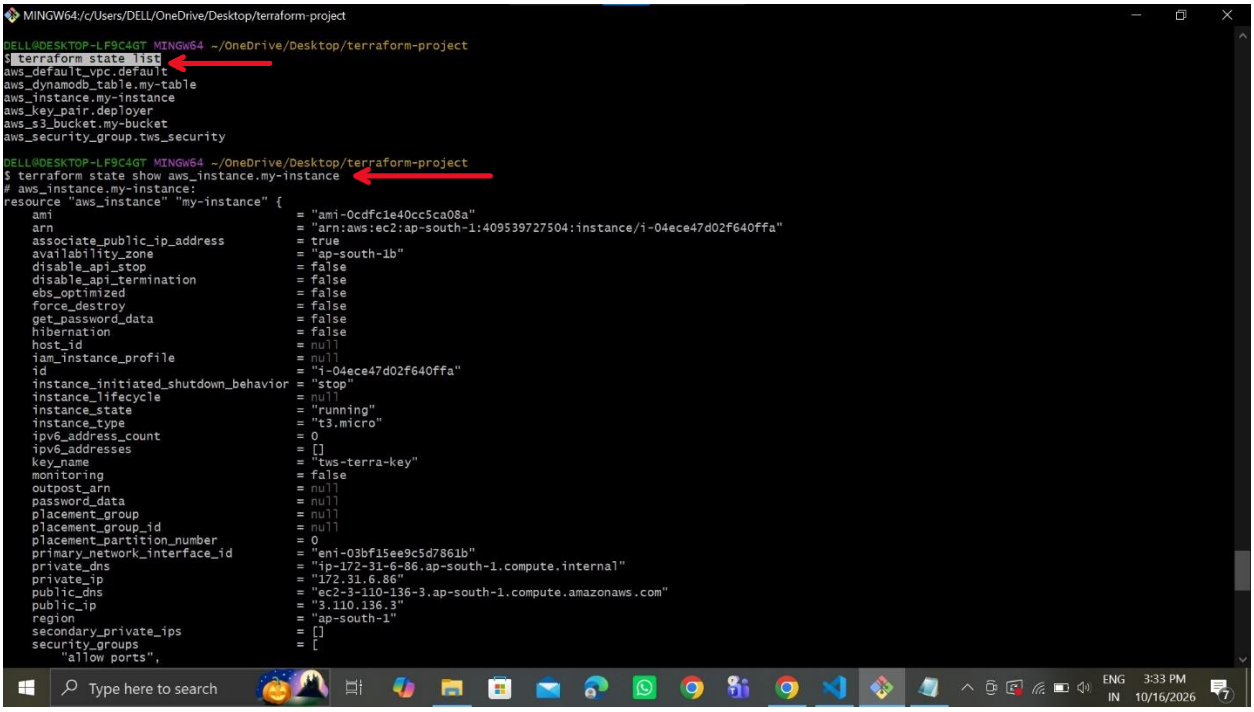

DynamoDB table successfully created

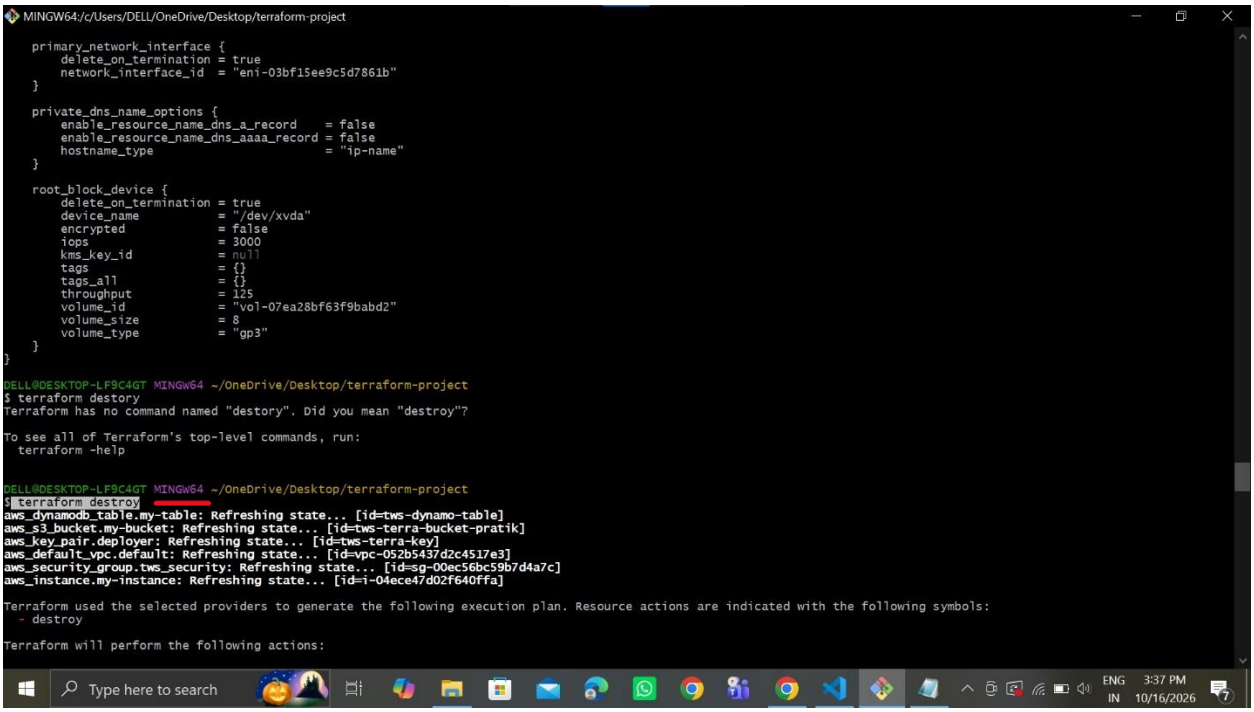

Then login this ec2 instance in Git bash terminal

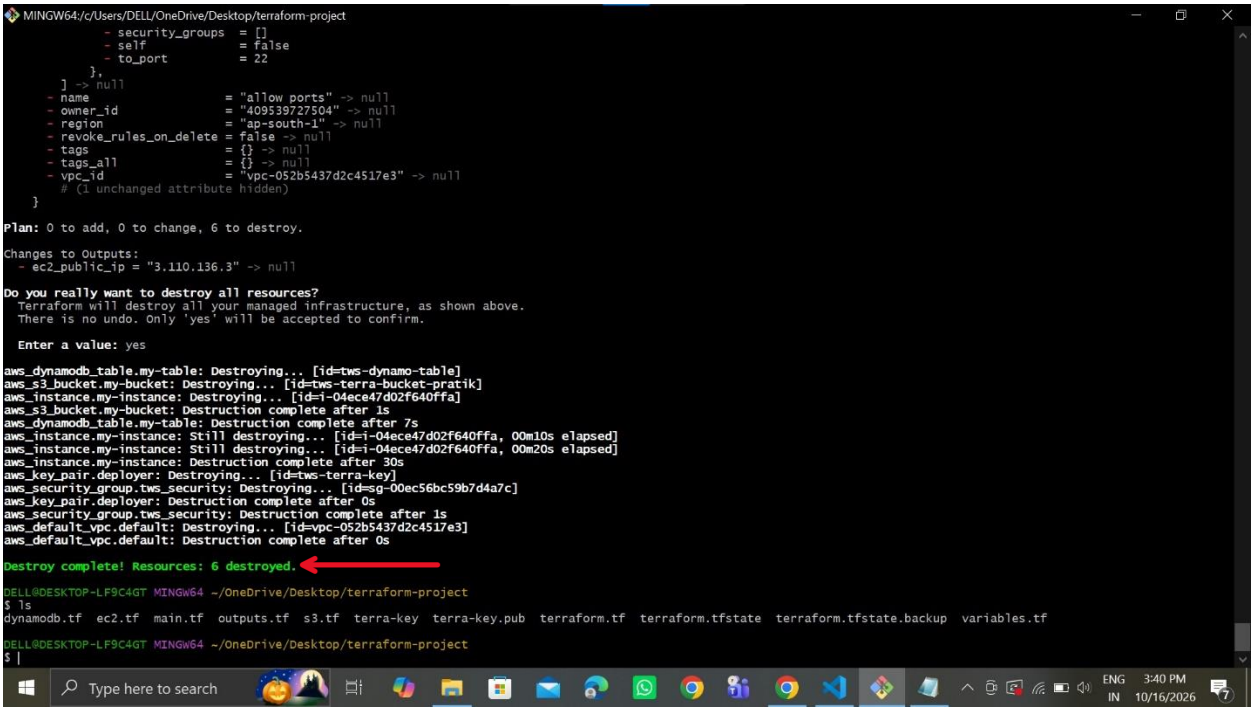

Then check Terraform state list , then check info of instance

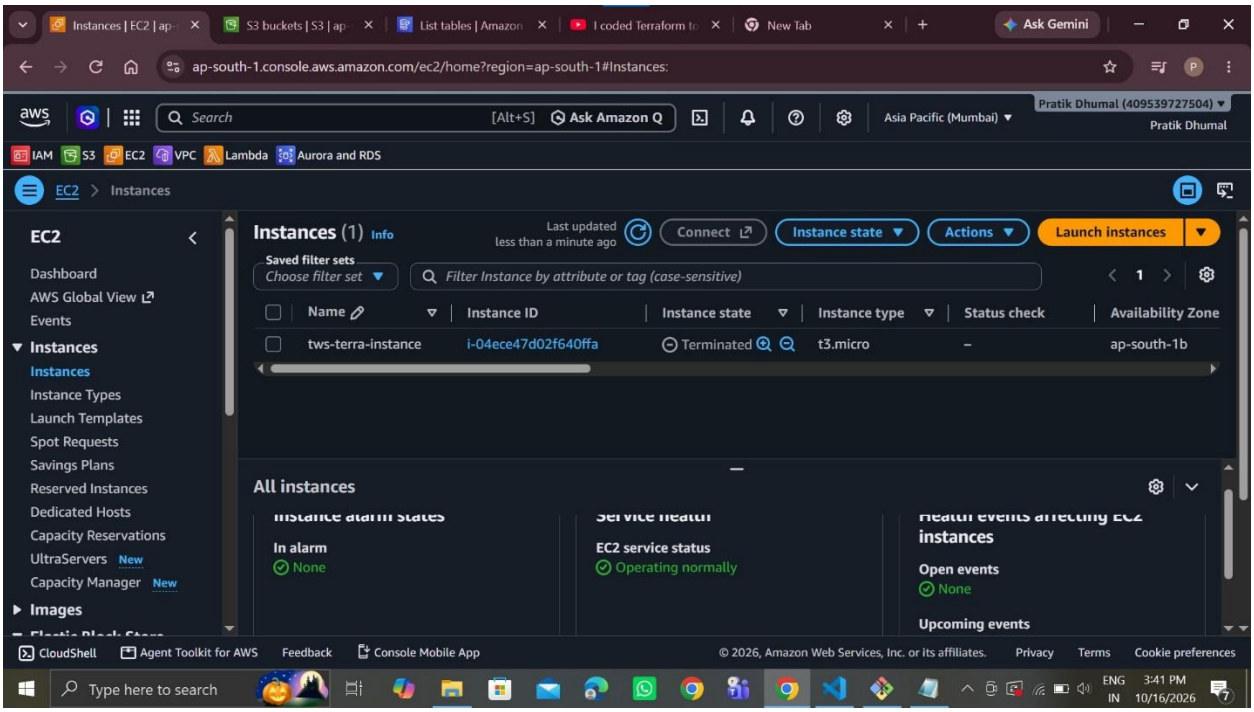

Then Terraform destroy

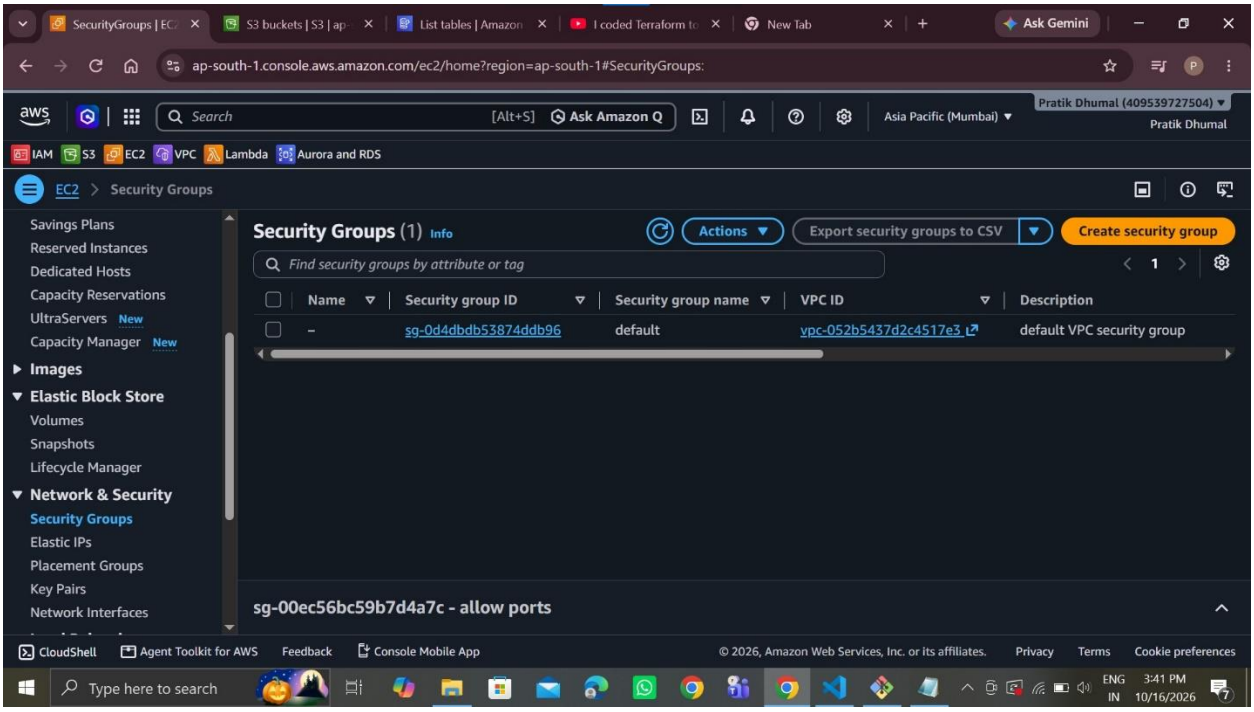

Then destroy successfully

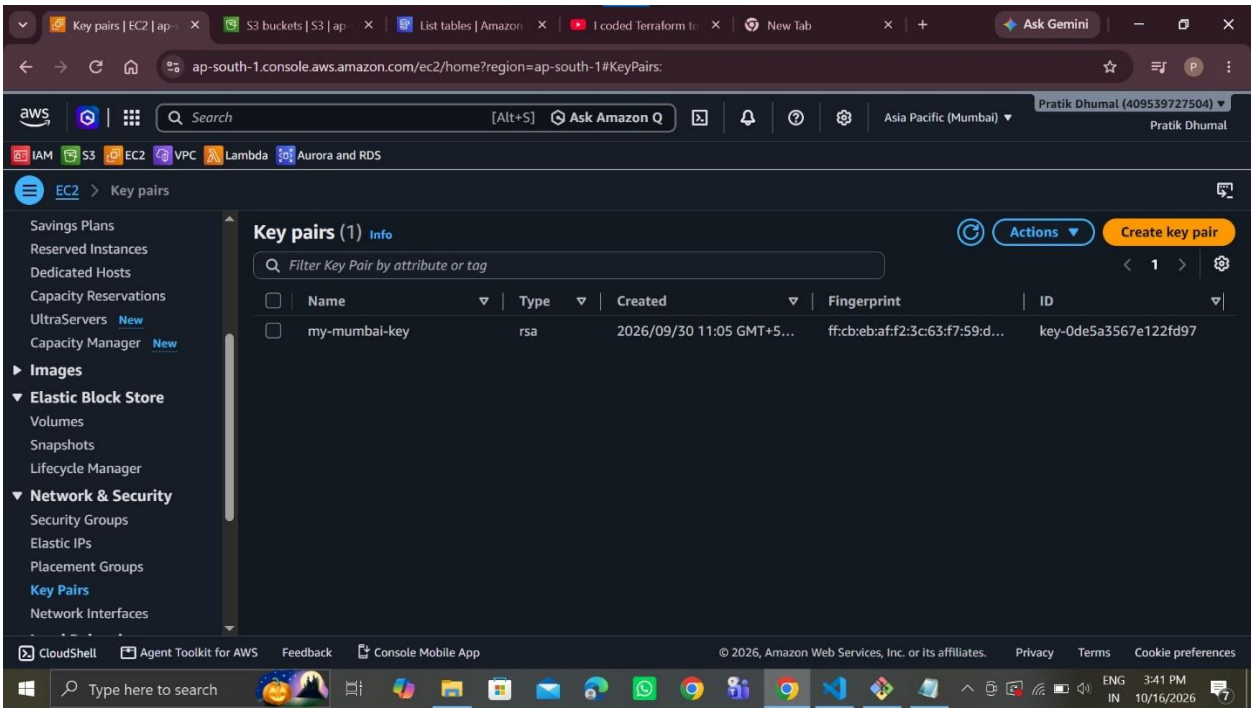

Ec2 instance successfully terminated

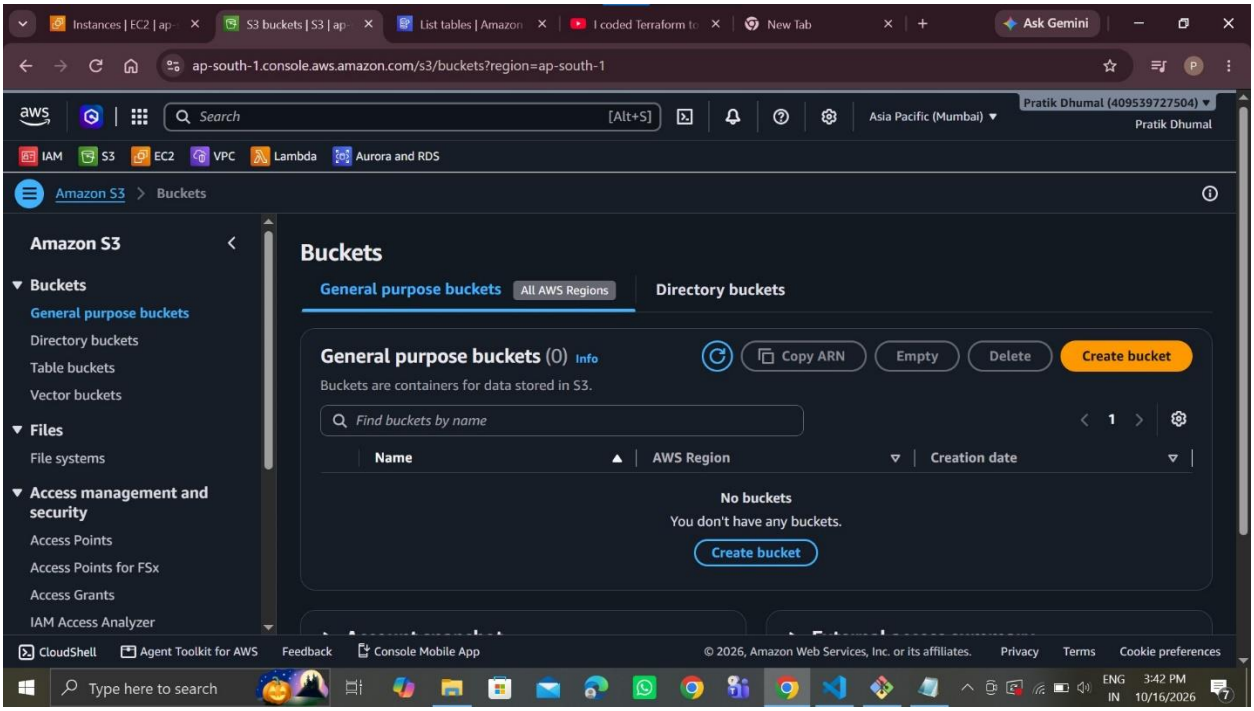

Security group also deleted

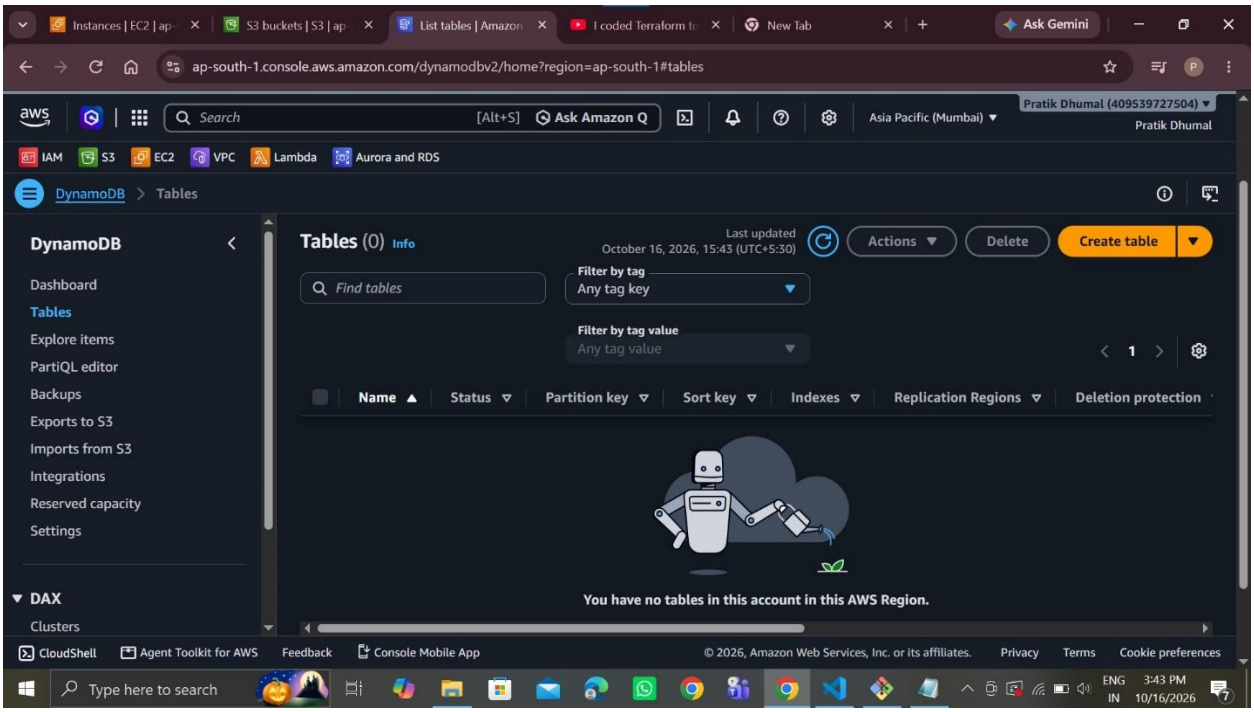

Key pair also deleted

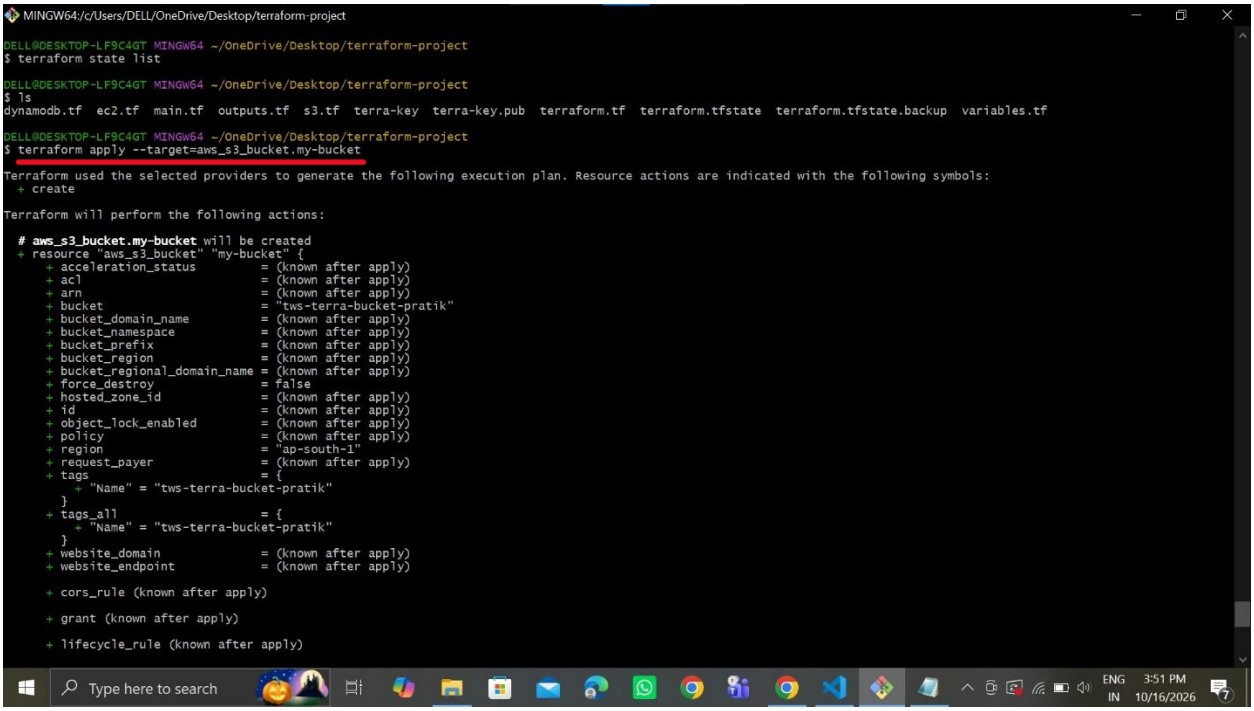

S3 bucket also deleted

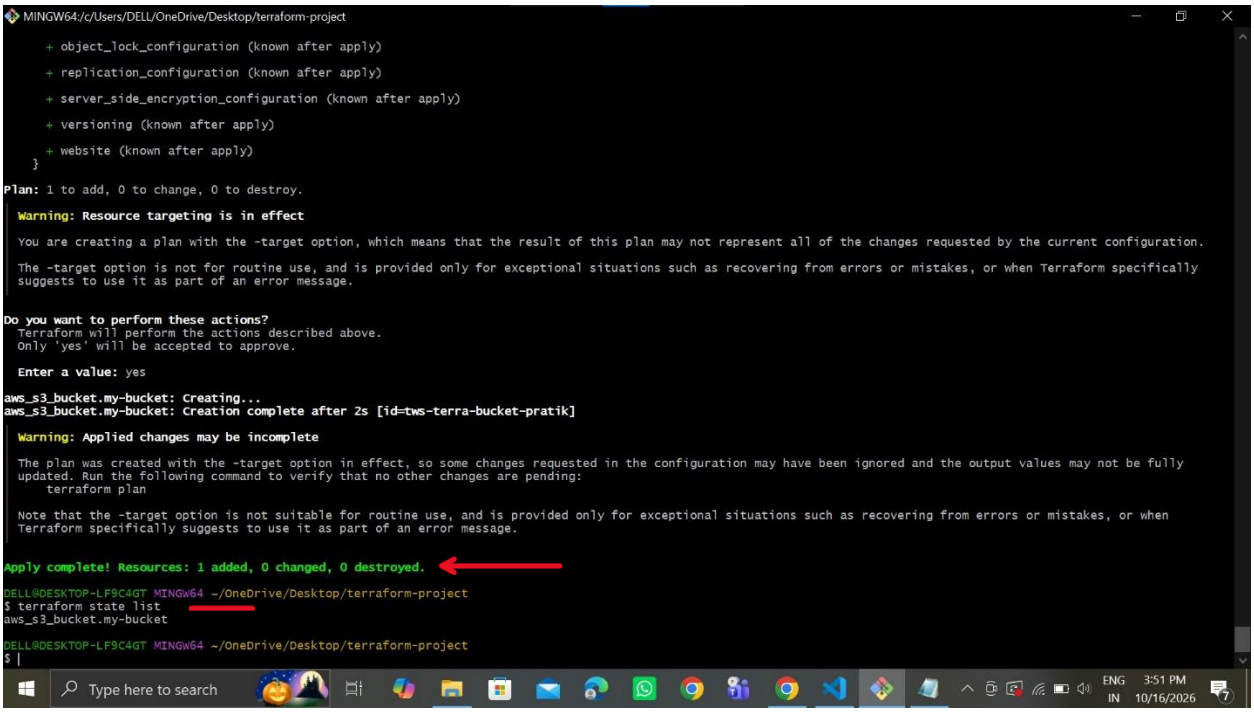

DynamoDB table also deleted

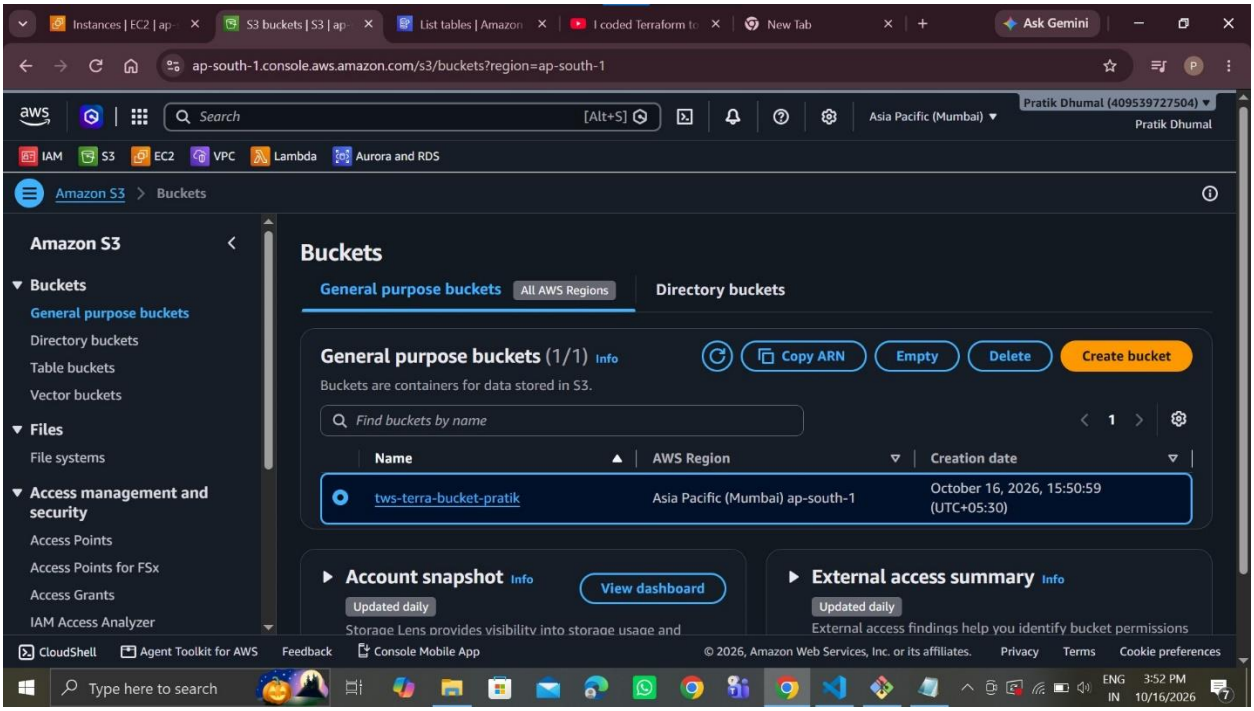

Then apply terraform in single file

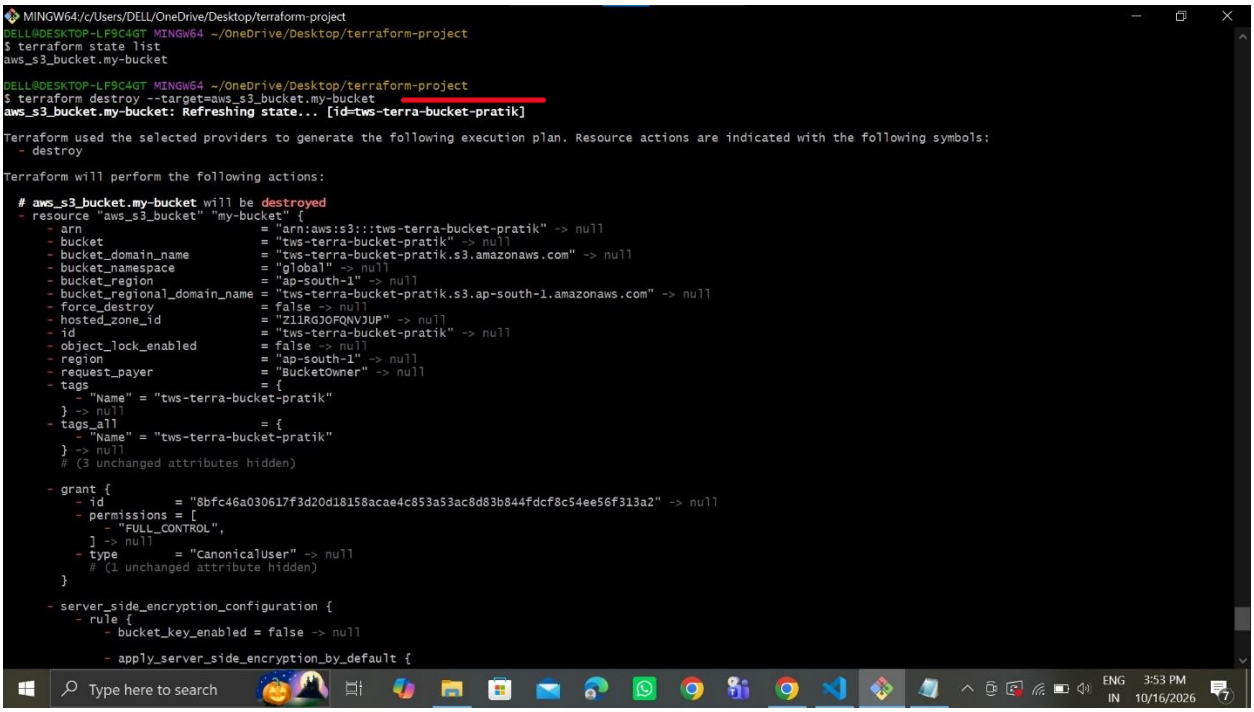

Successfully apply

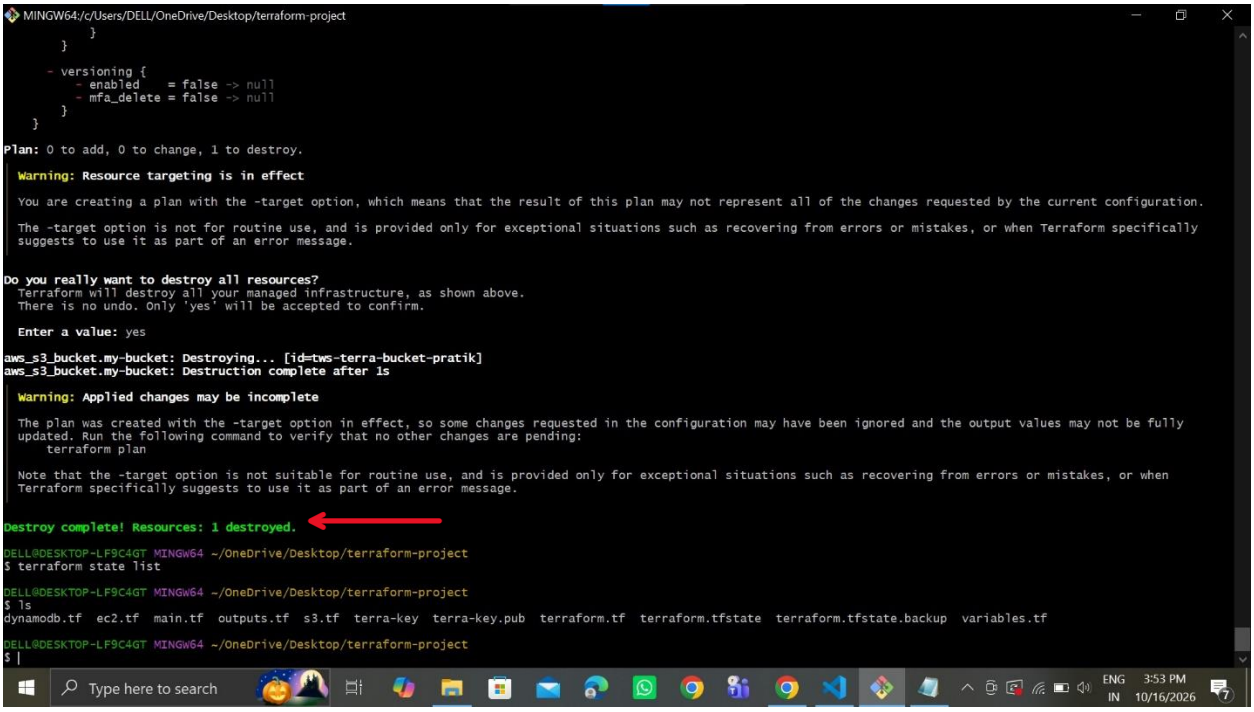

S3 bucket successfully created

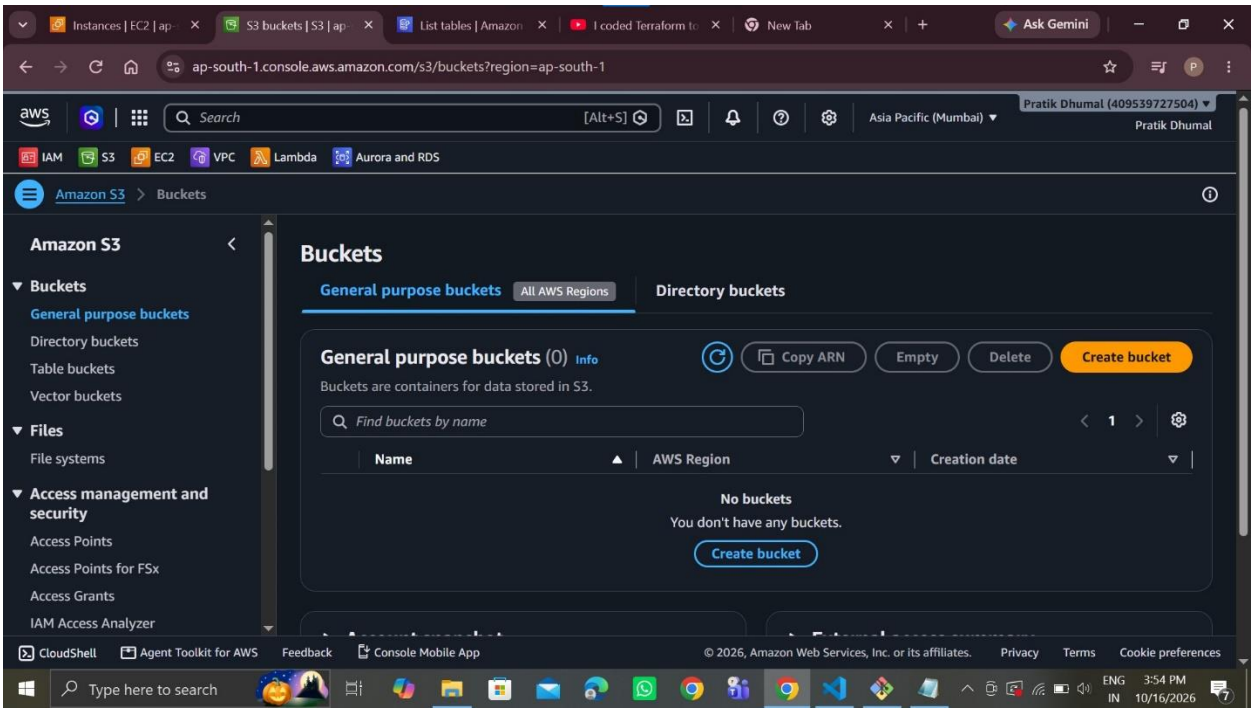

Then destroy this bucket

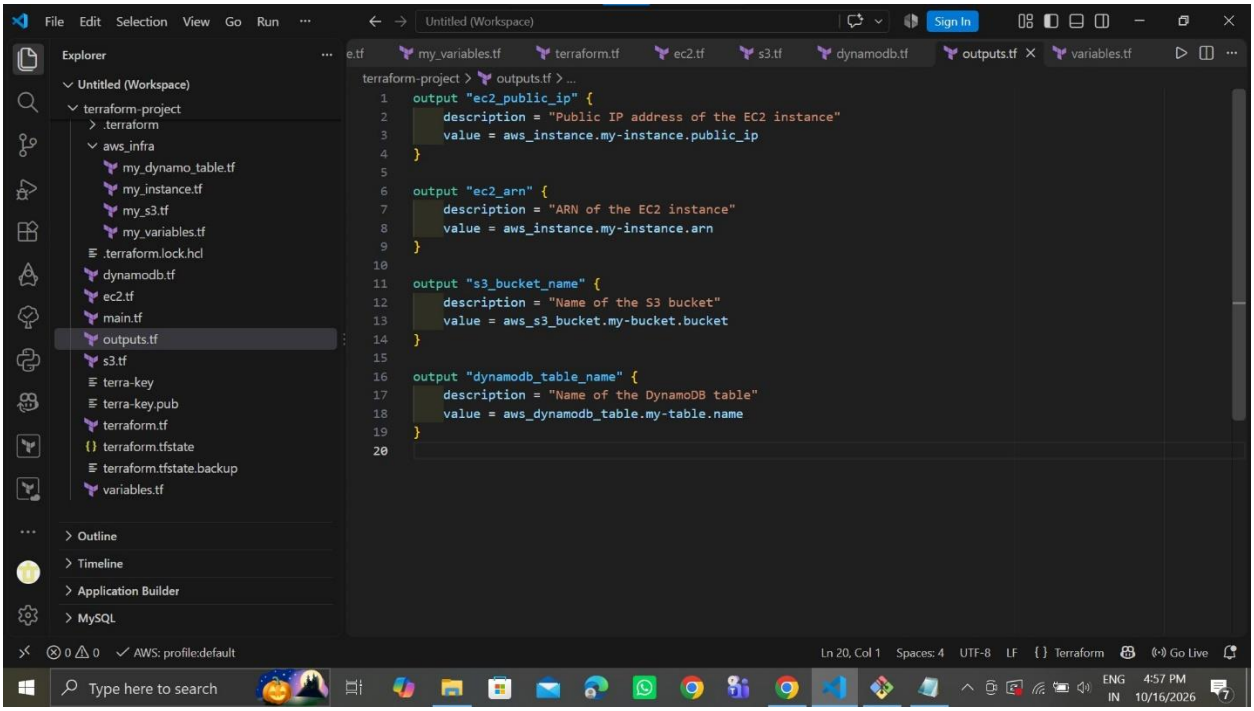

Successfully destroy this bucket

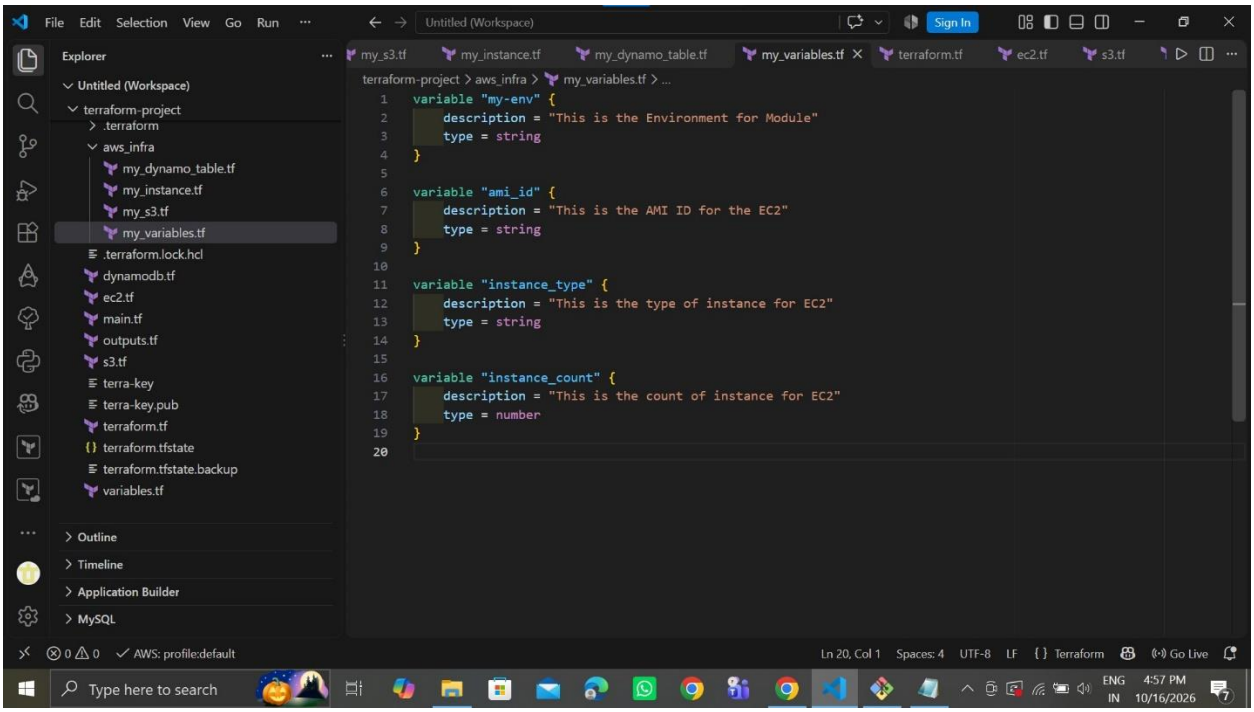

This bucket this bucket

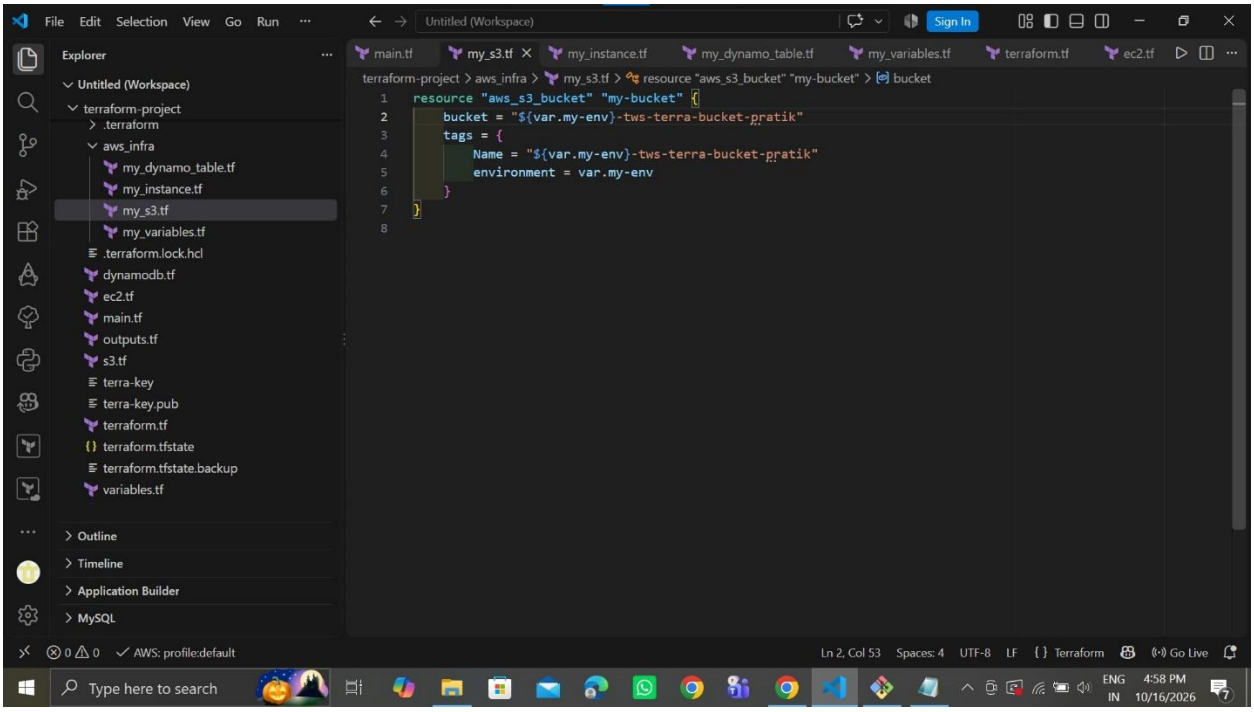

Outputs.tf file

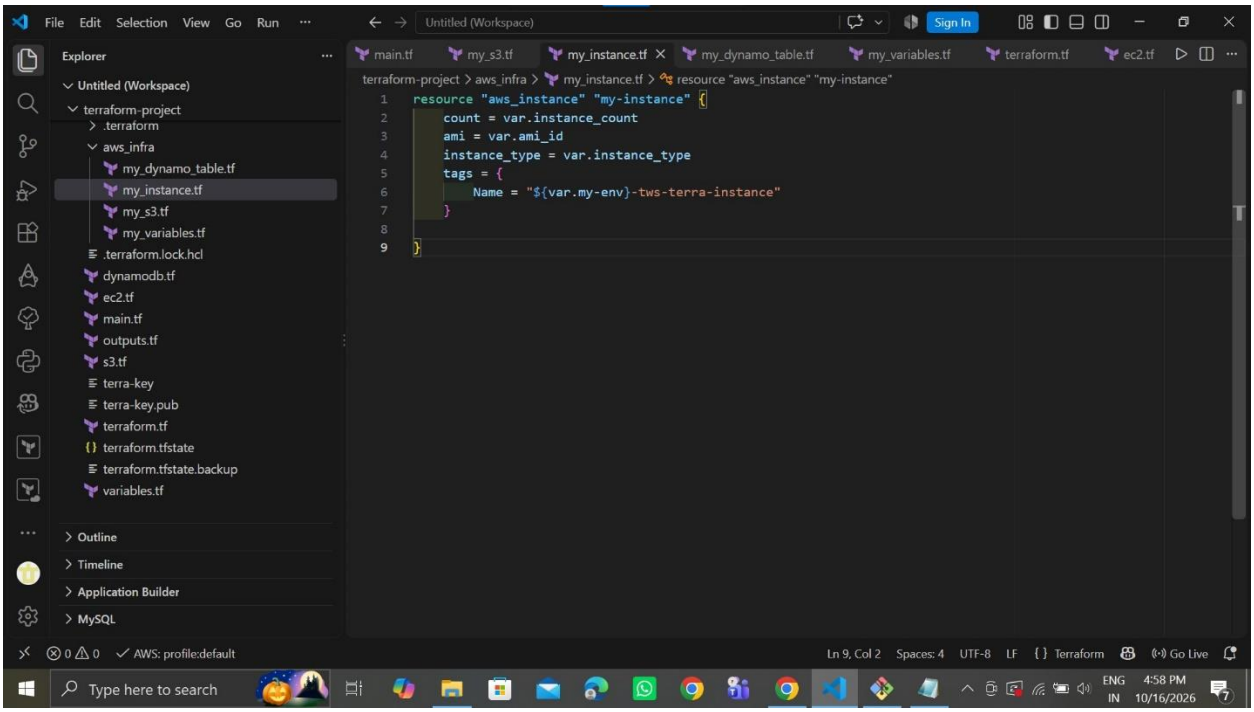

My_variables.tf file

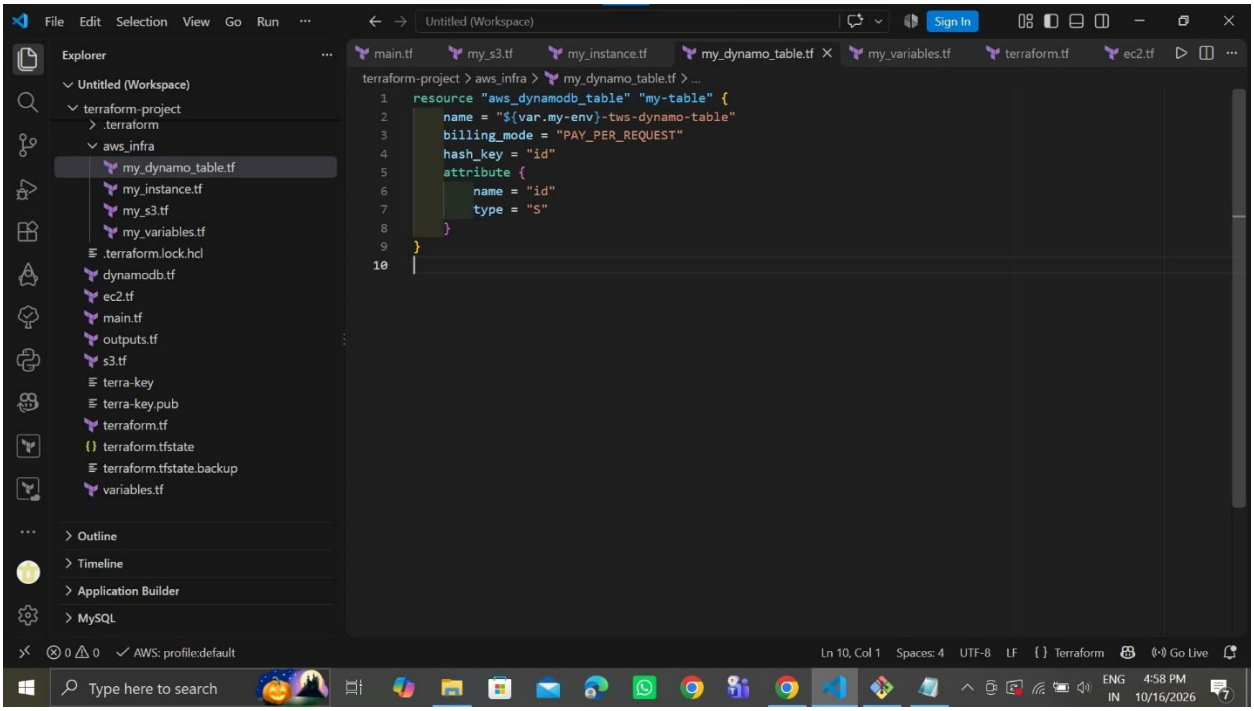

My_s3.tf file

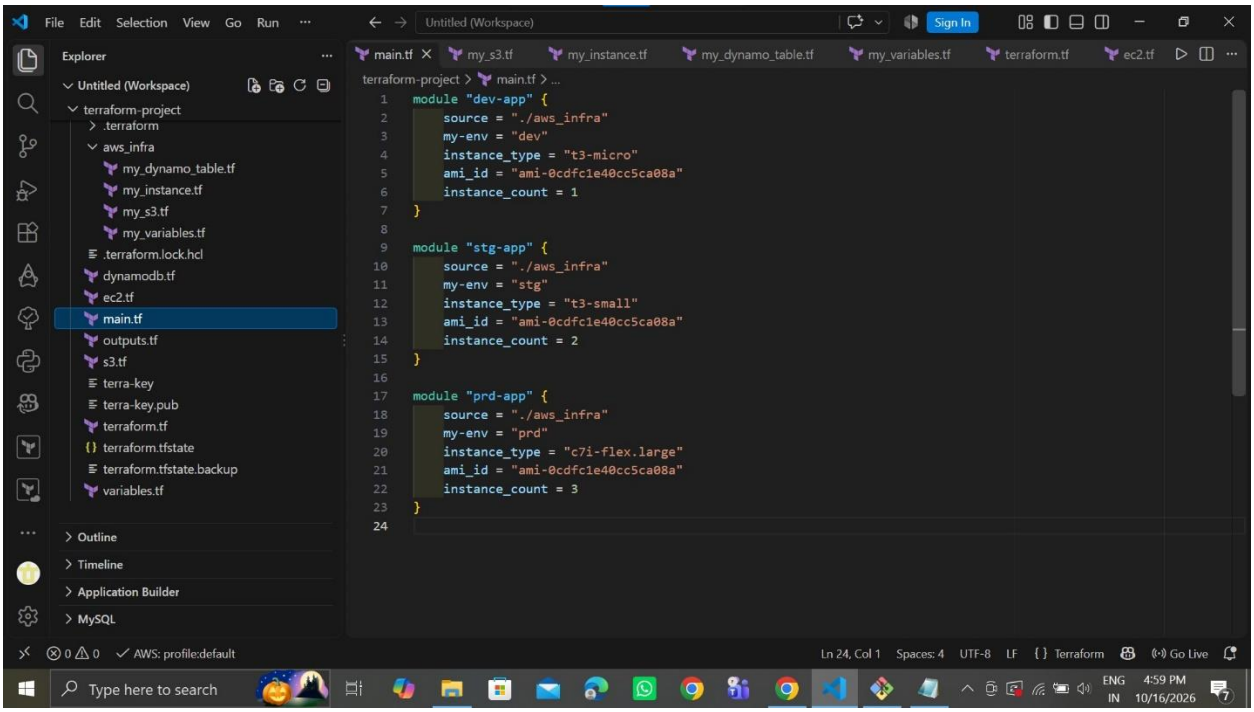

My_instance.tf file

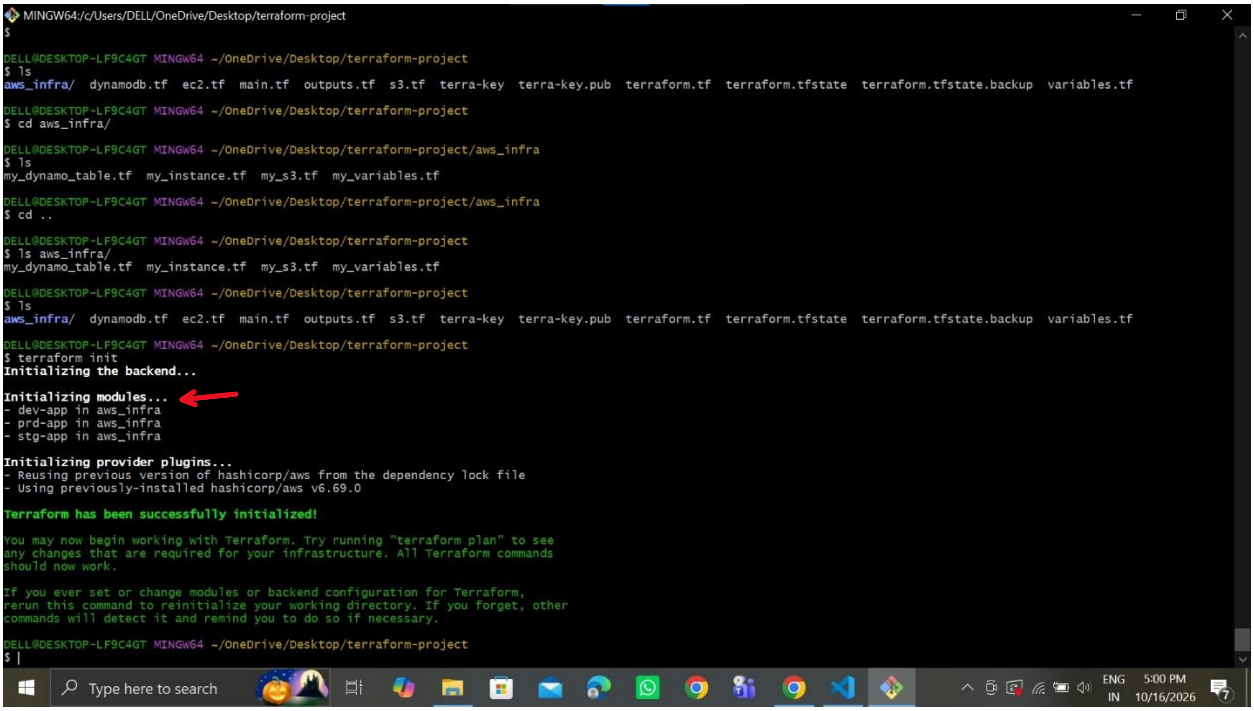

My_dynamo_table.tf file

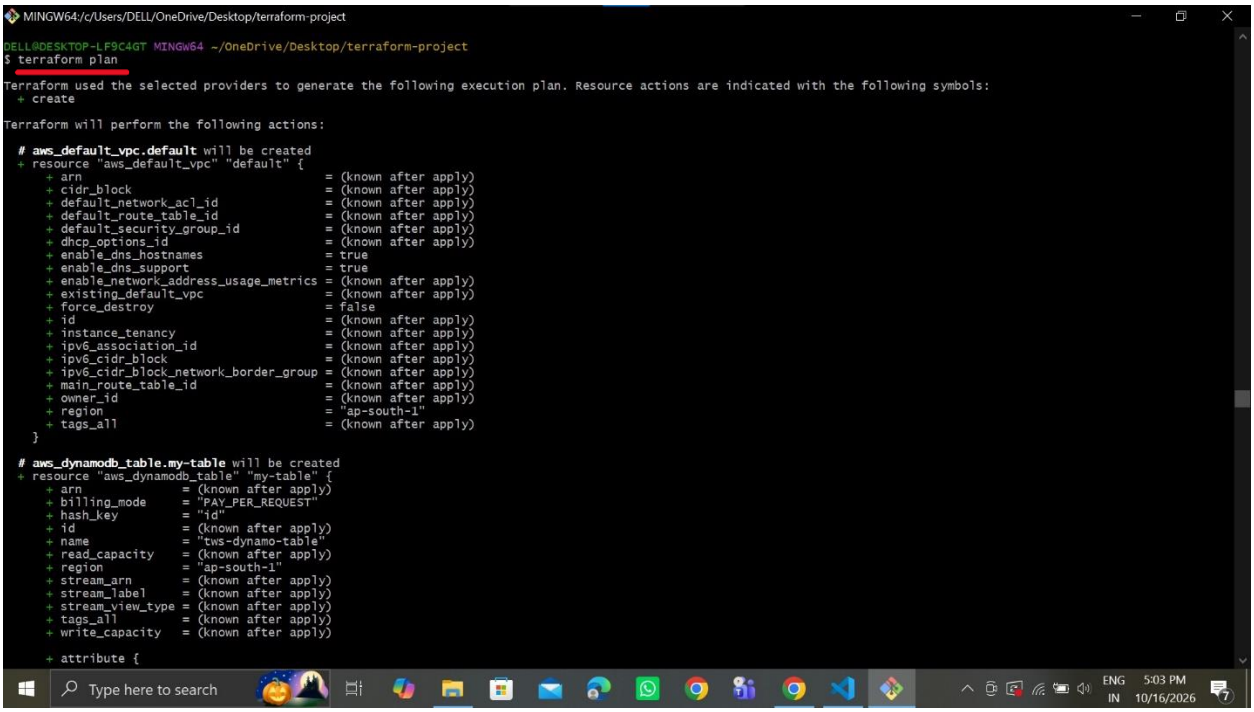

Main.tf file

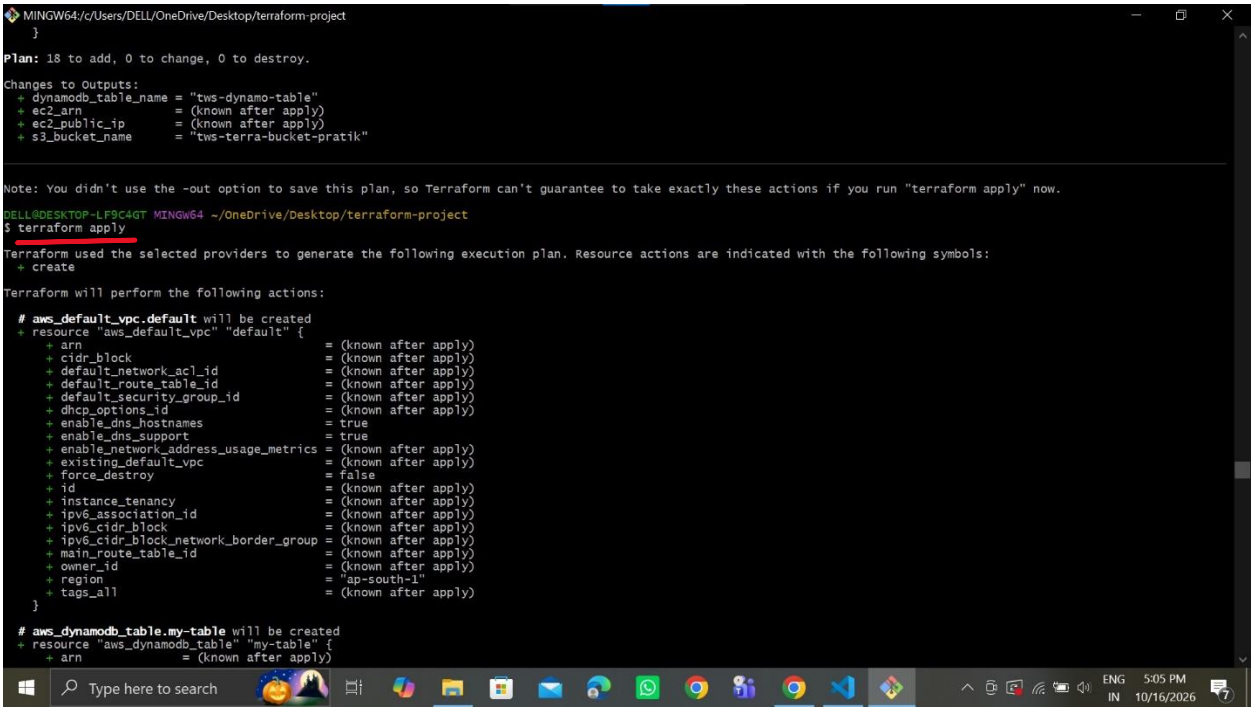

Then Terraform init , Module successfully initialize

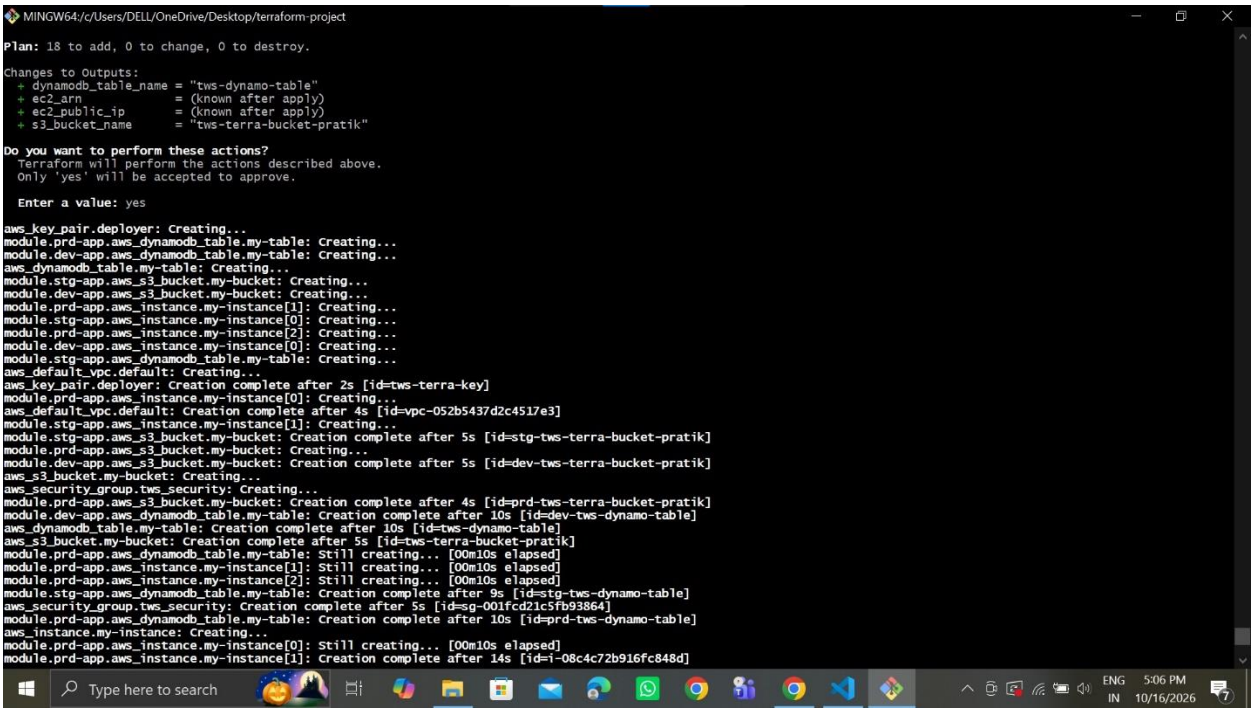

Then terraform plan

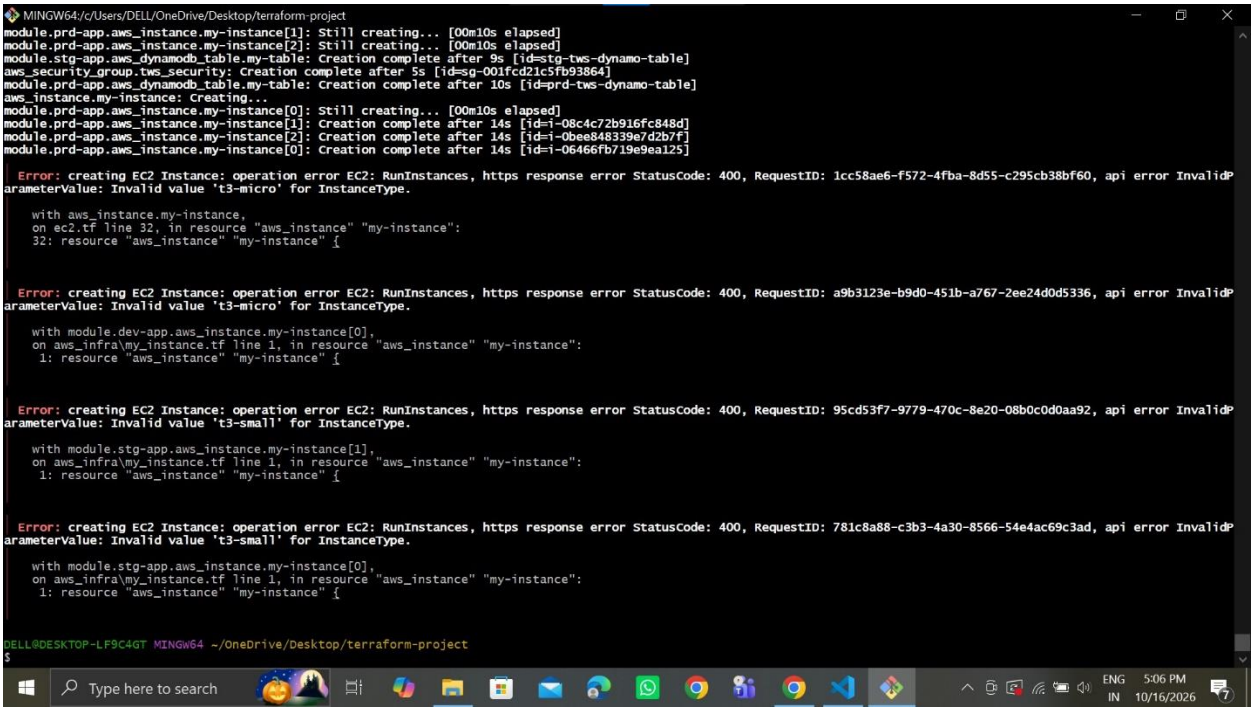

Then Terraform apply

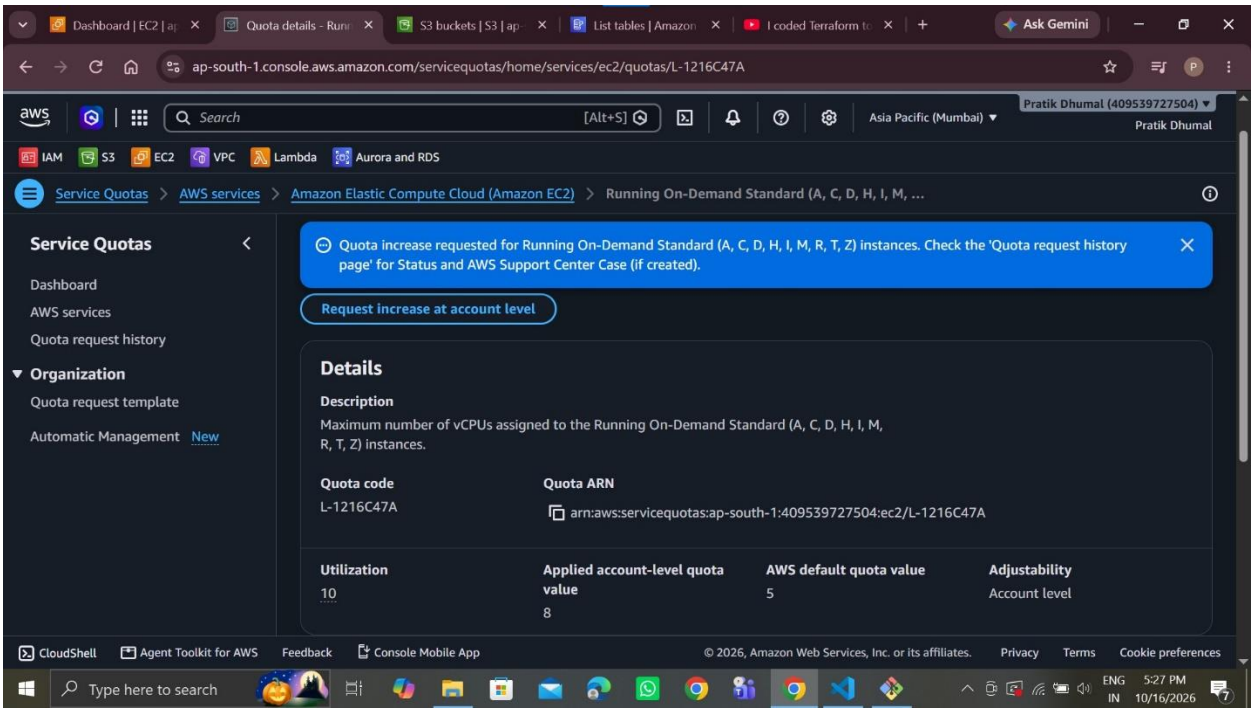

Creating

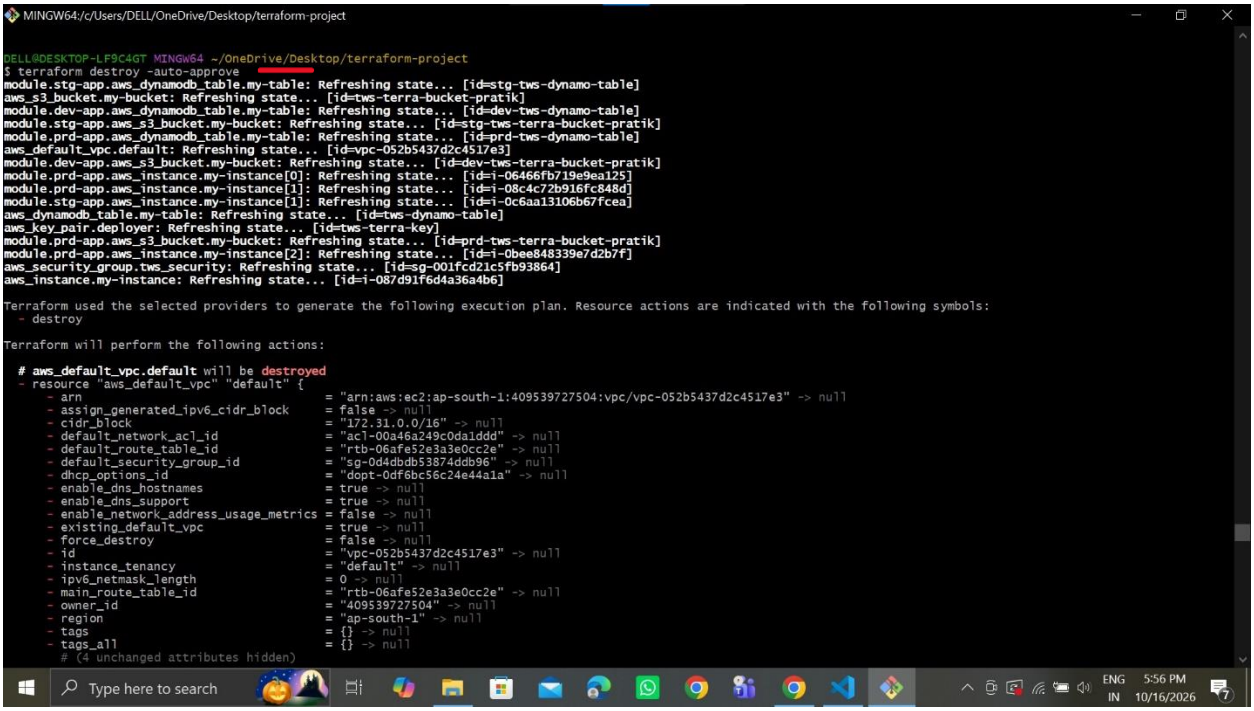

Then Mumbai region vCPU limit is full then show error

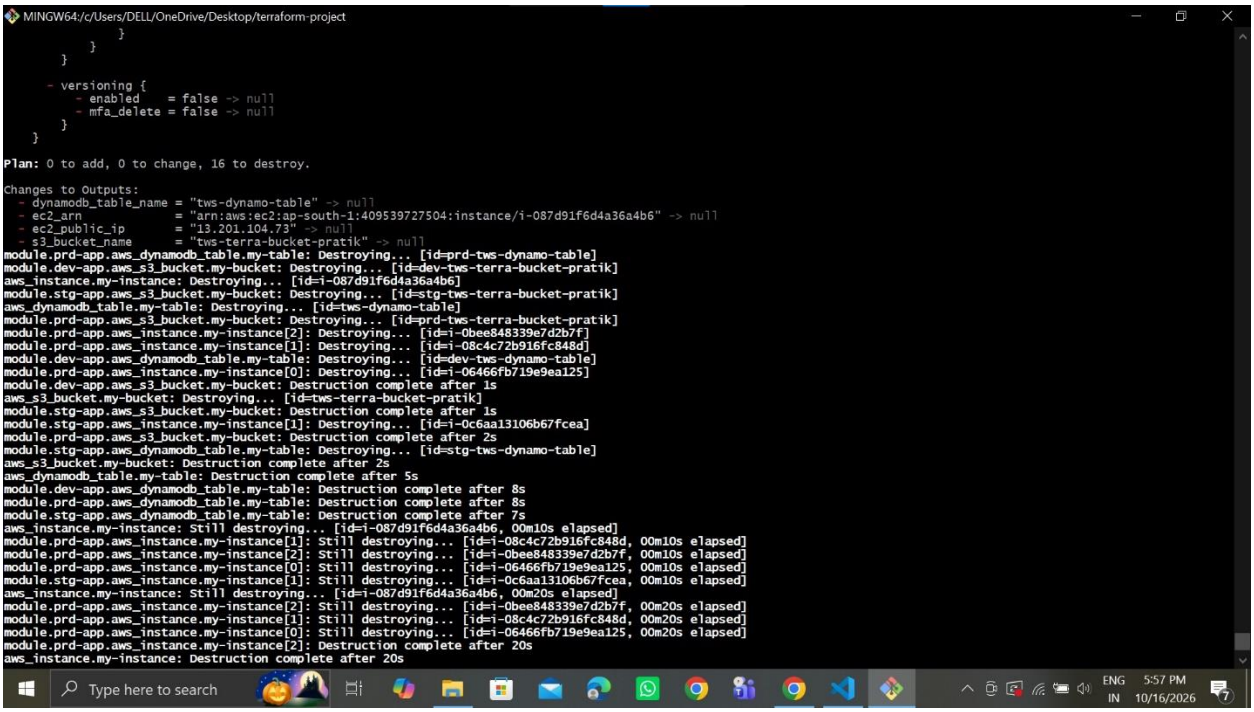

Then go to Service Quotas service & search EC2 and Request to increase the vCPU limit

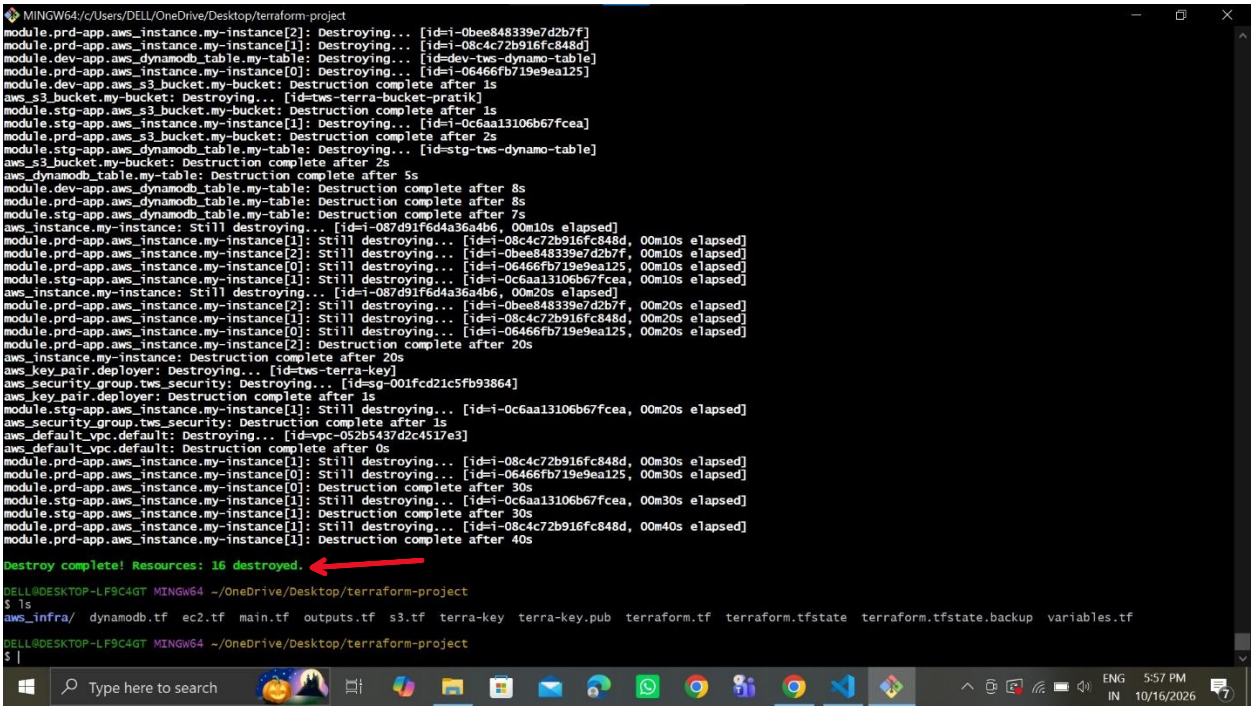

Then Terraform destroy

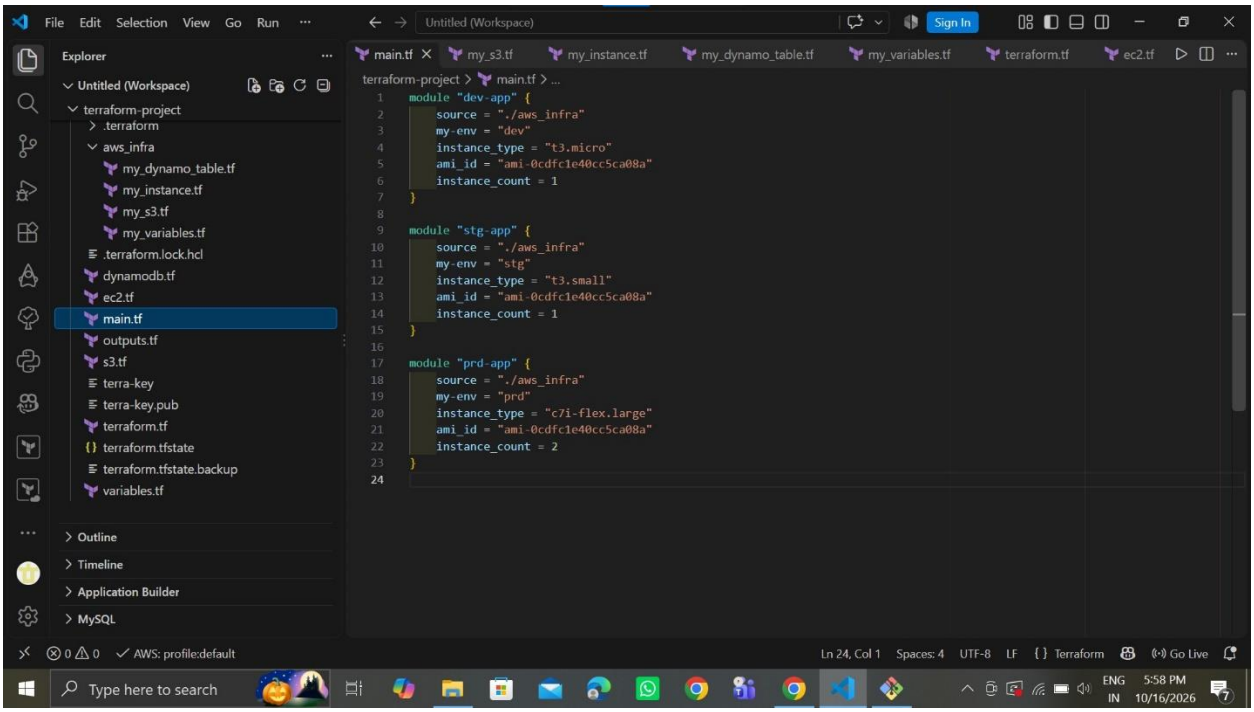

Destroying

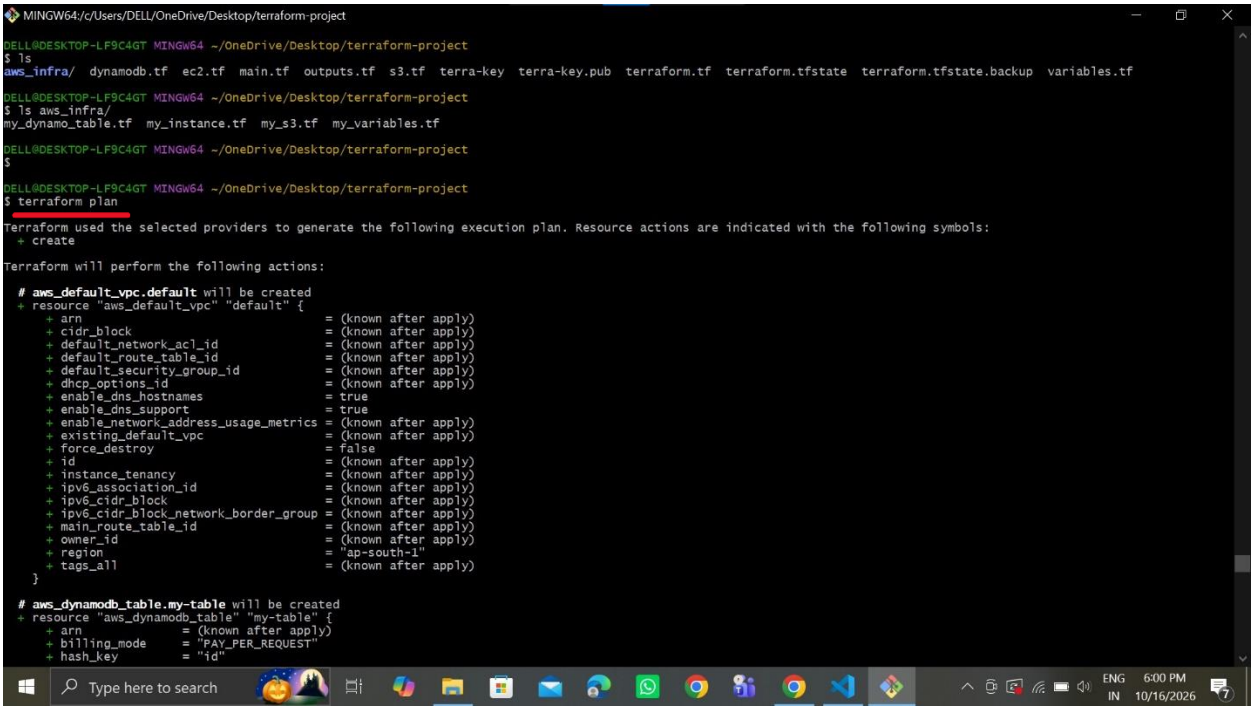

Successfully destroy

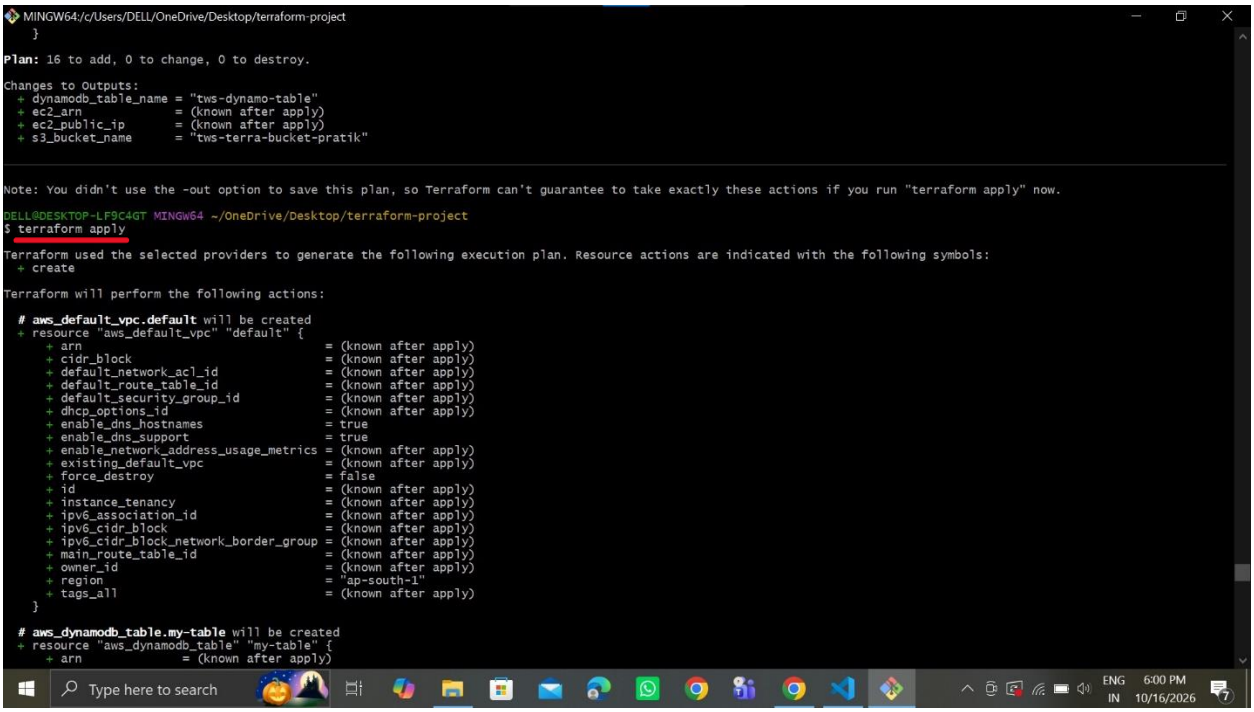

Then go to Main.tf file & minimize the instance count

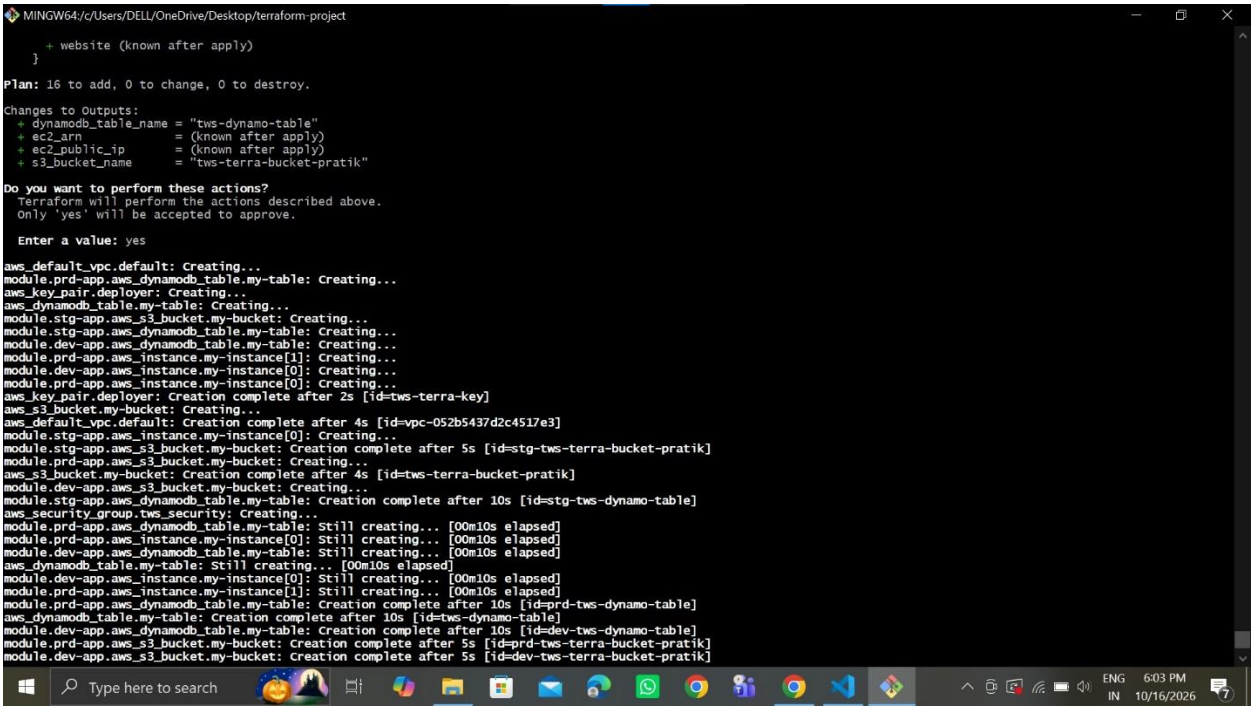

Then terraform plan

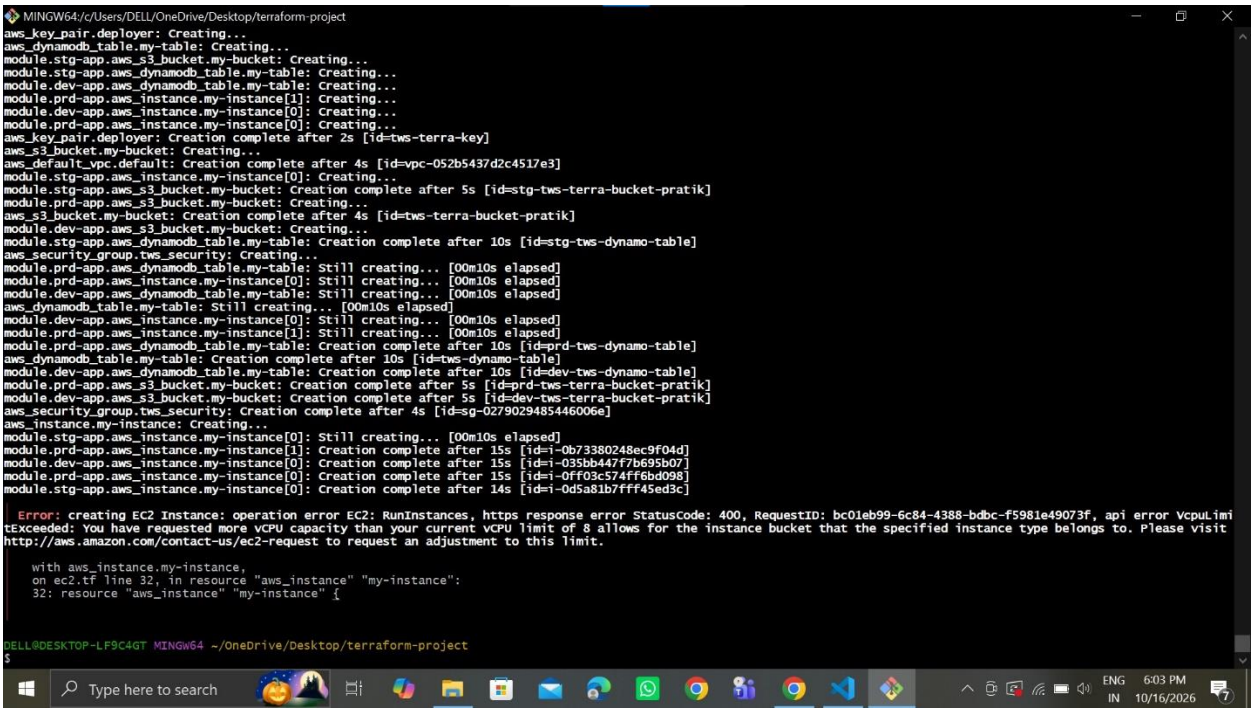

Then terraform apply

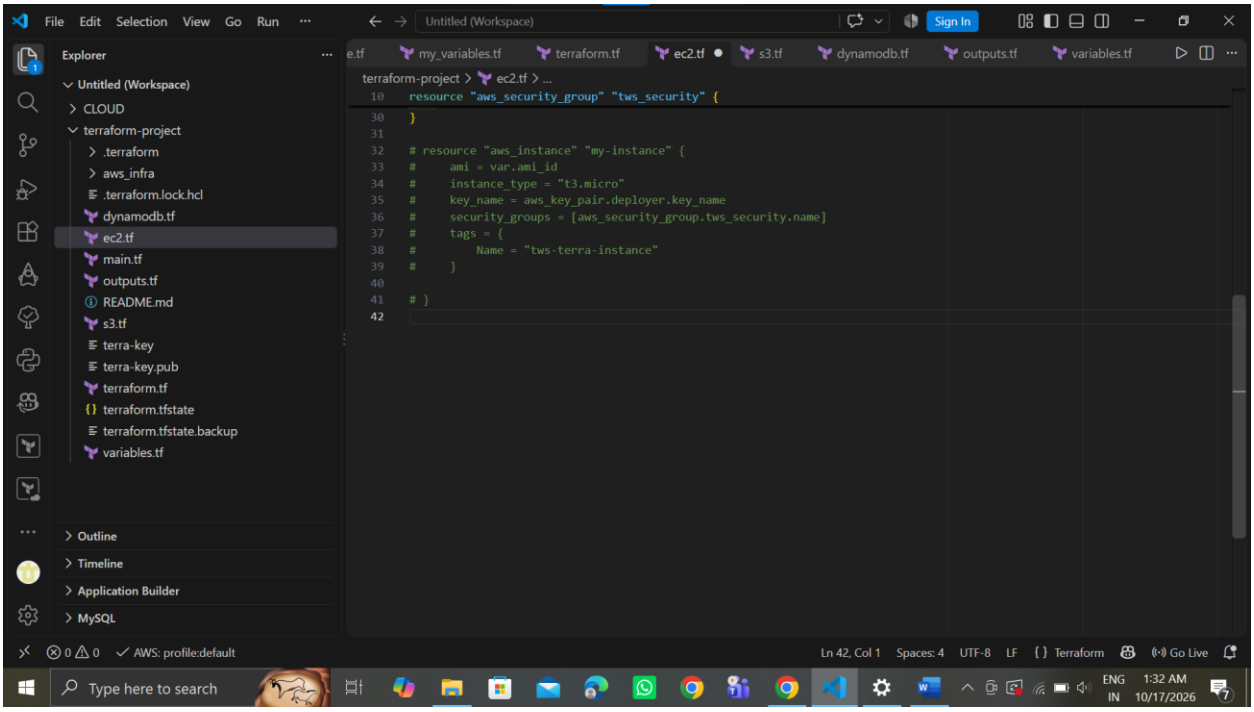

Creating

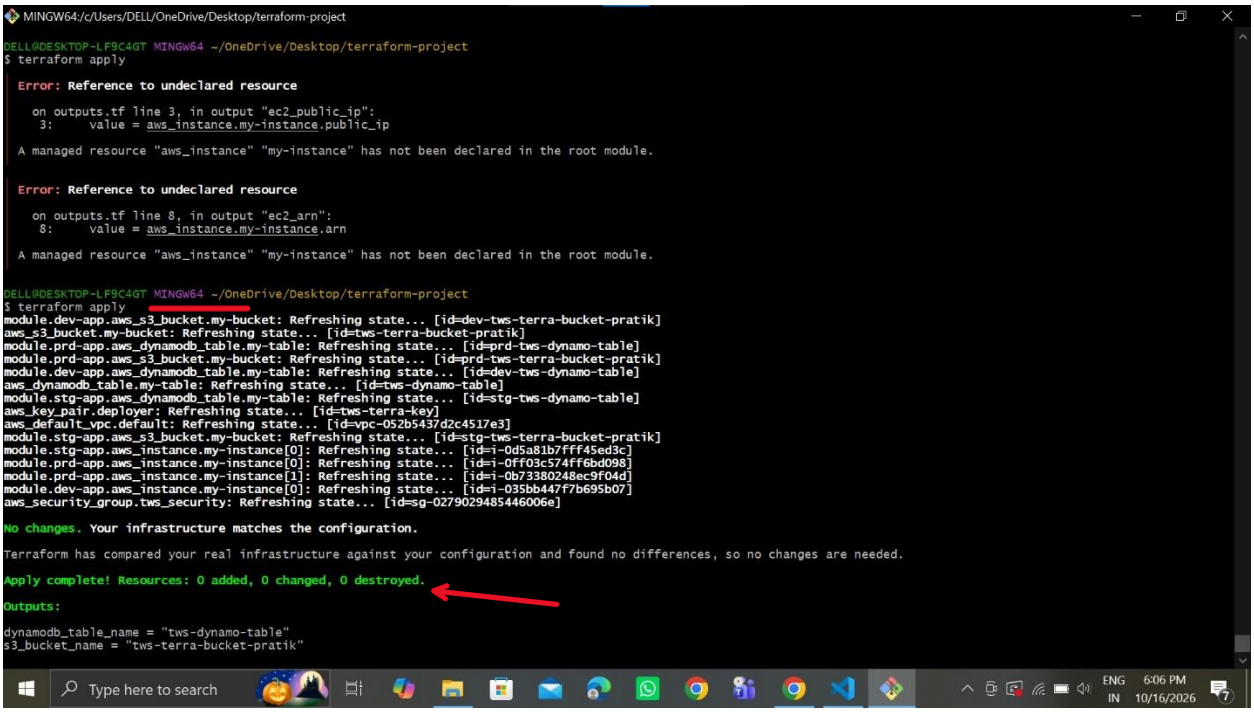

This Mumbai region vCPU count in 8 instances is 5 then show this error

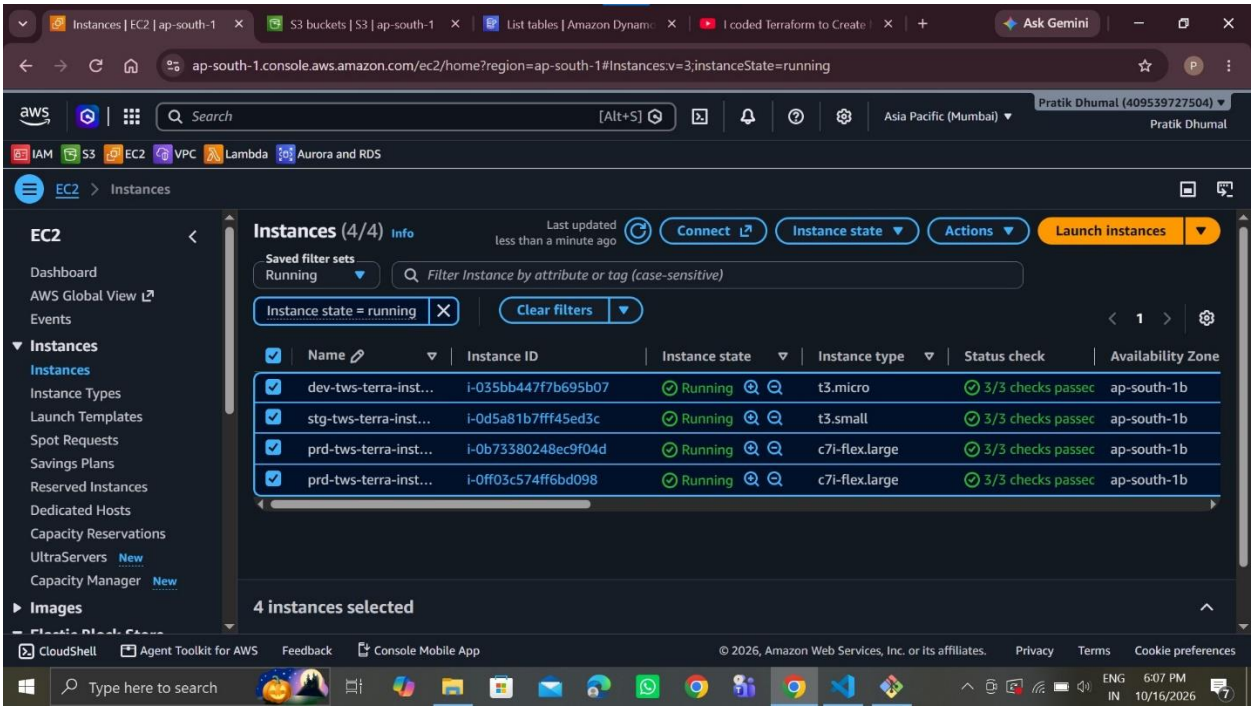

Then comment out the ec2.tf file instance

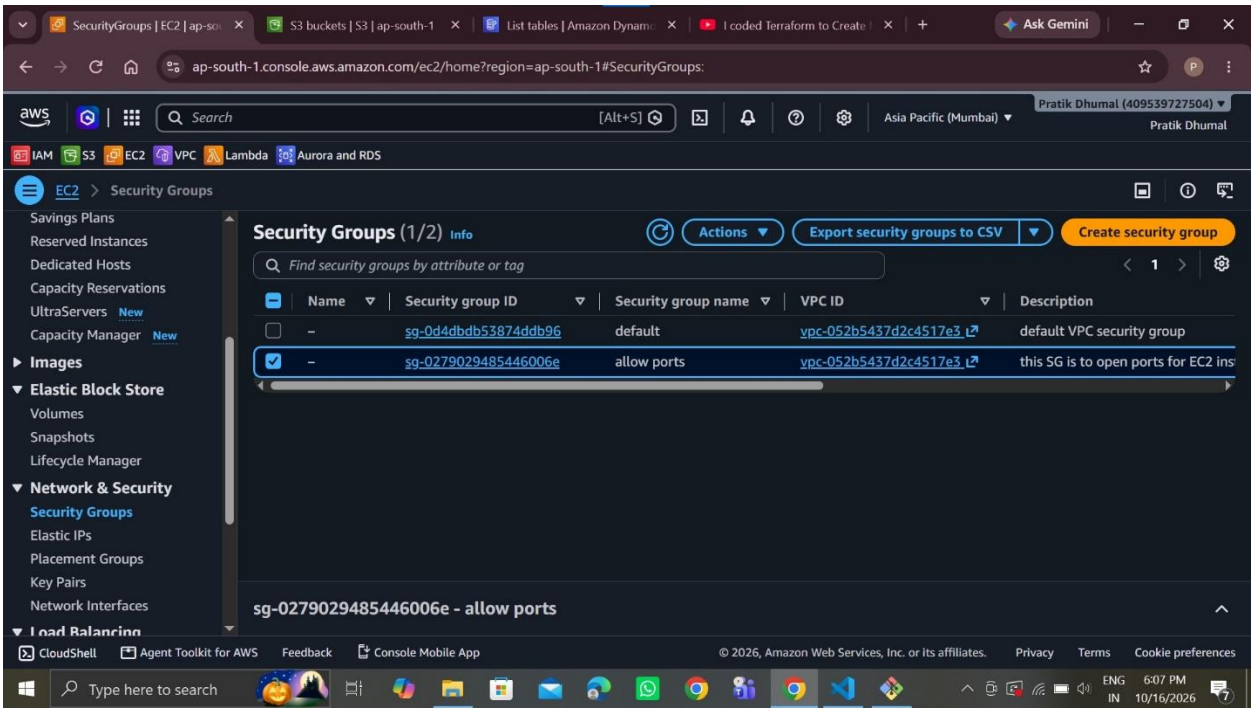

Then terraform apply , apply complete successfully

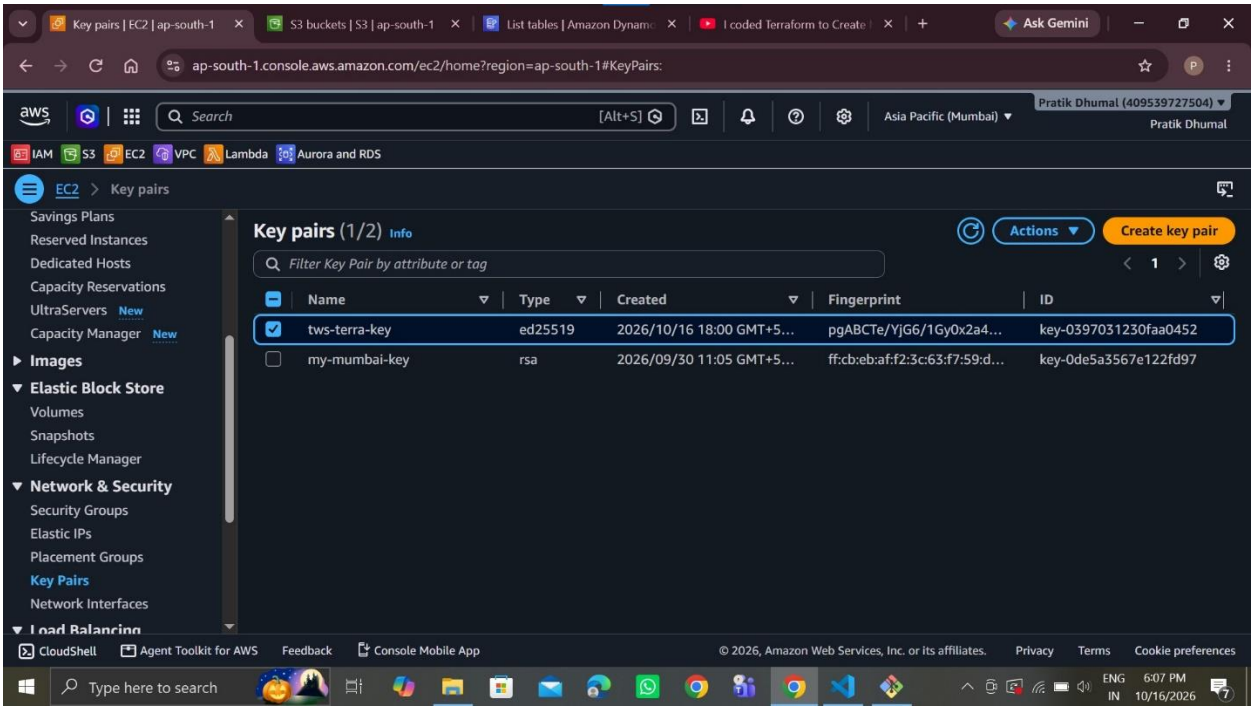

Successfully launch this ec2 instances

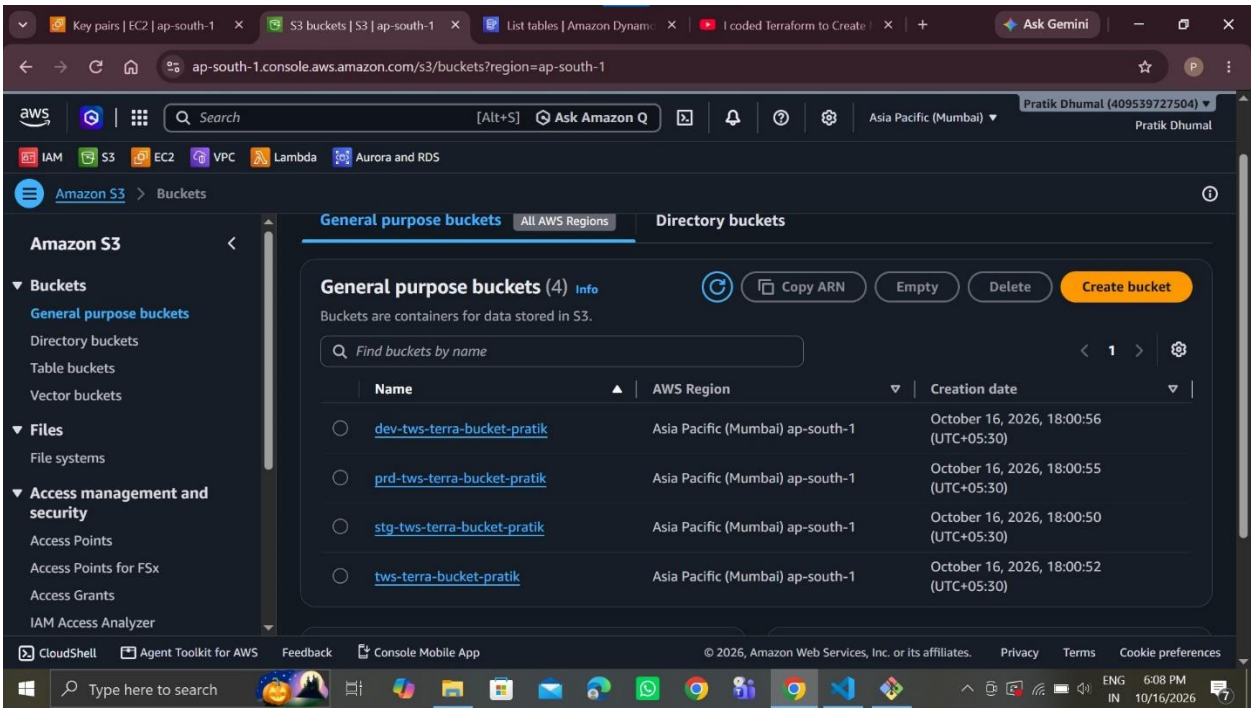

Successfully Create Security group

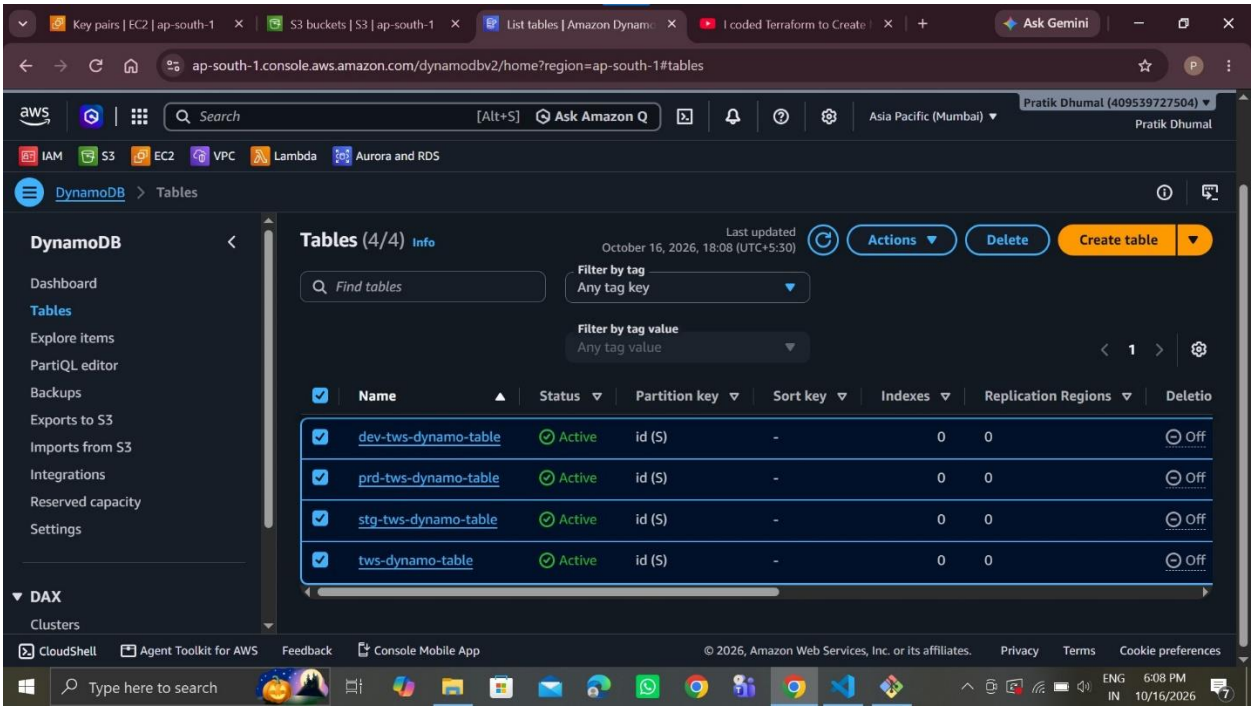

Then successfully create Key pair

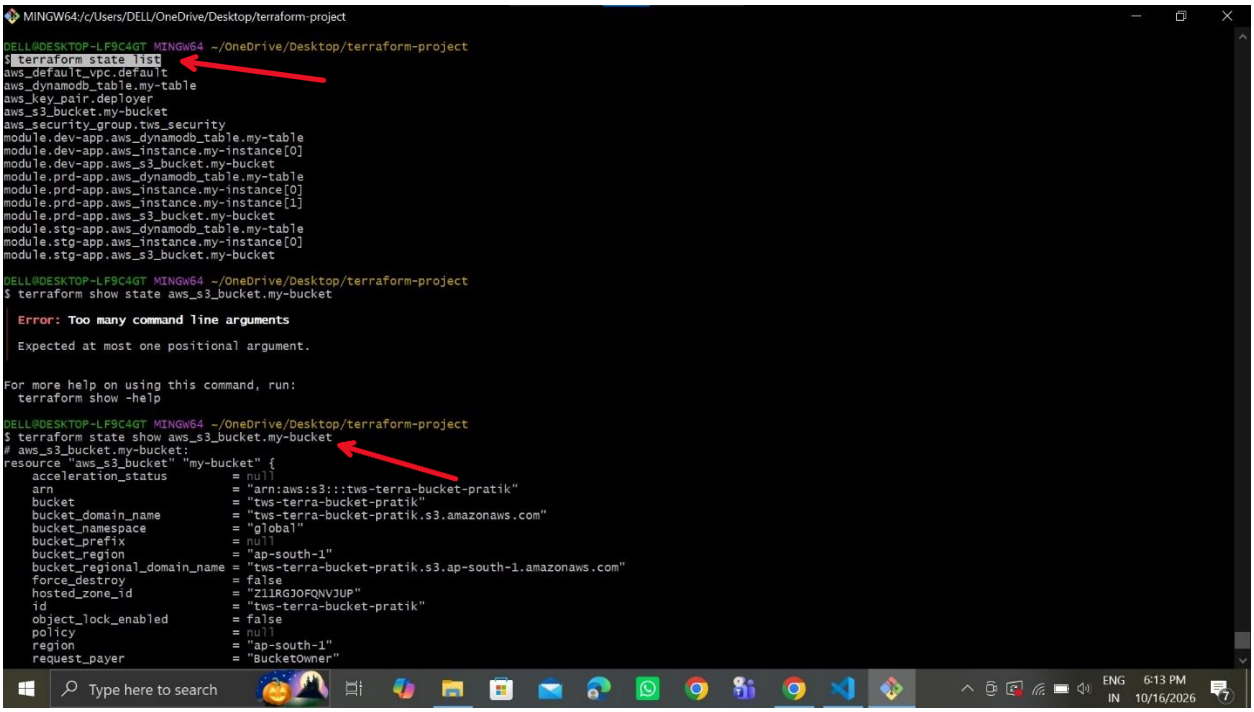

Then successfully created all bucket

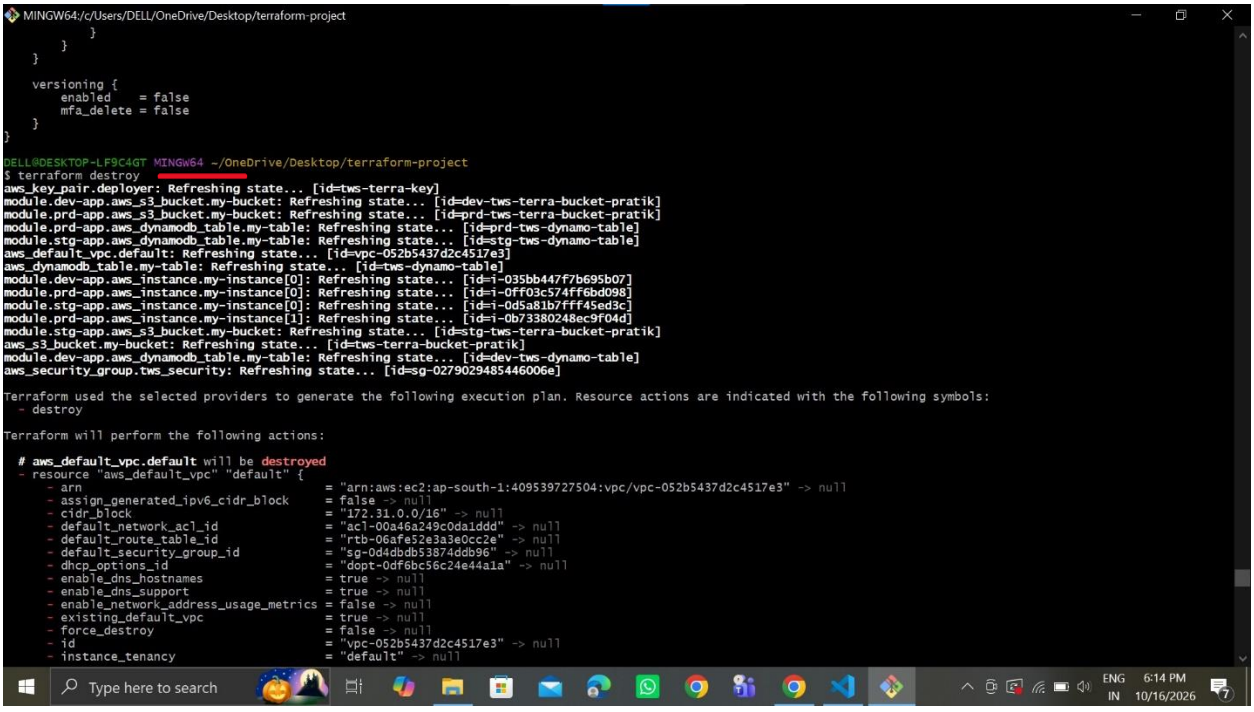

Then successfully created DynamoDB table

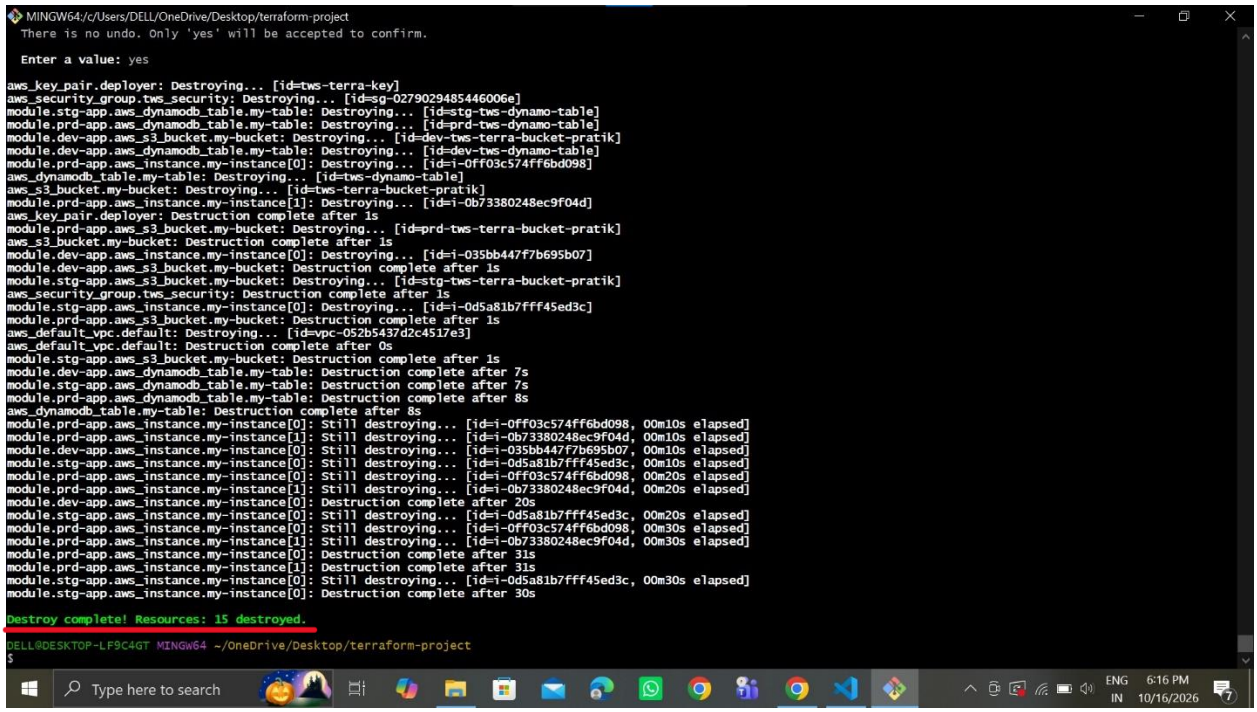

Then check terraform state list , then check info of bucket

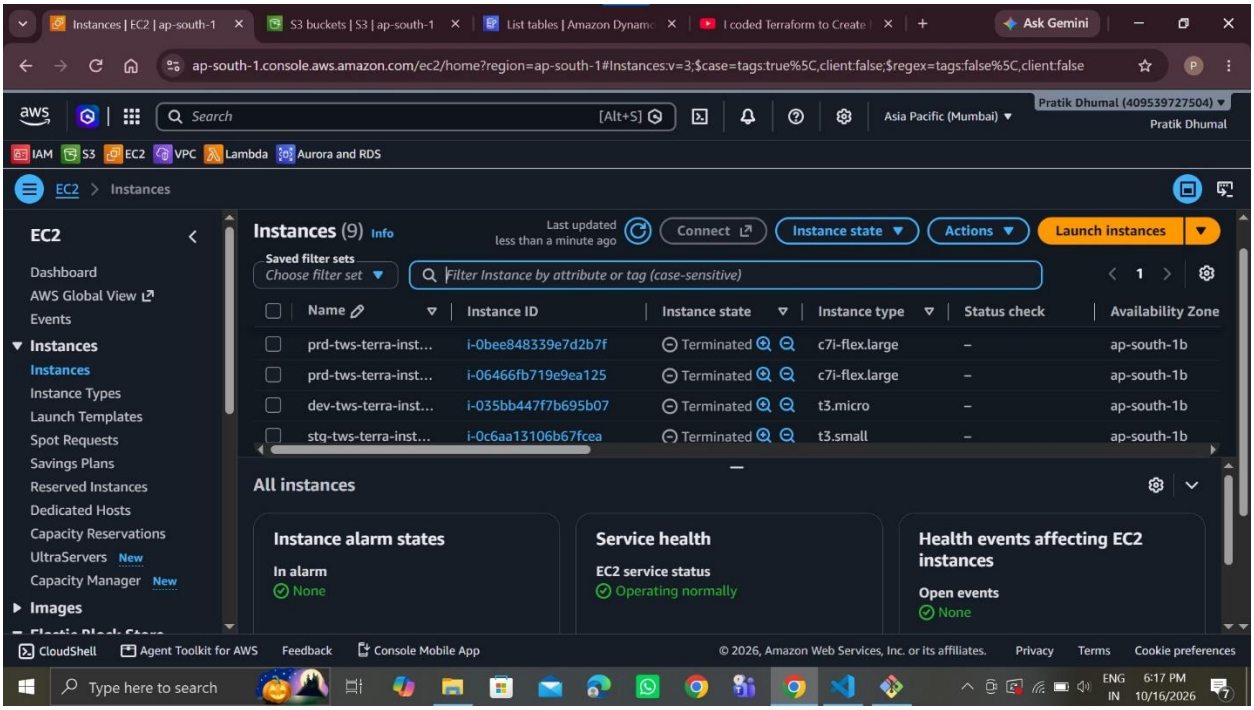

Then Terraform destroy

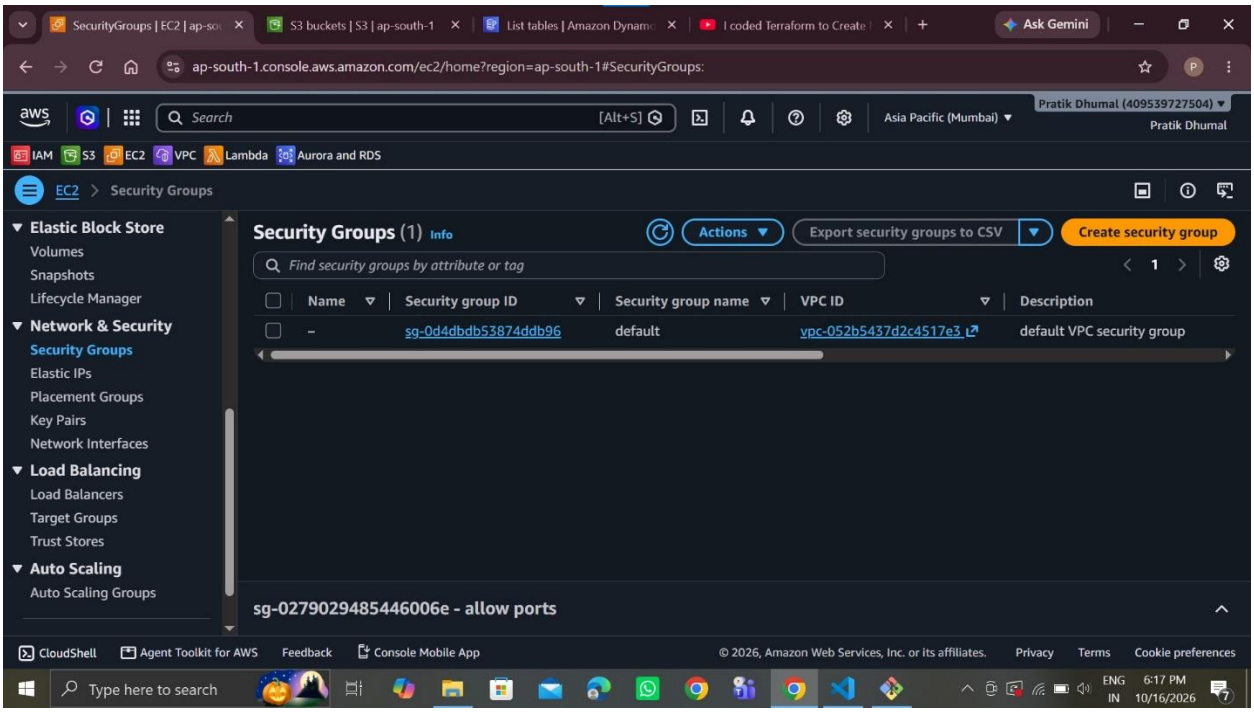

Successfully all resources destroy

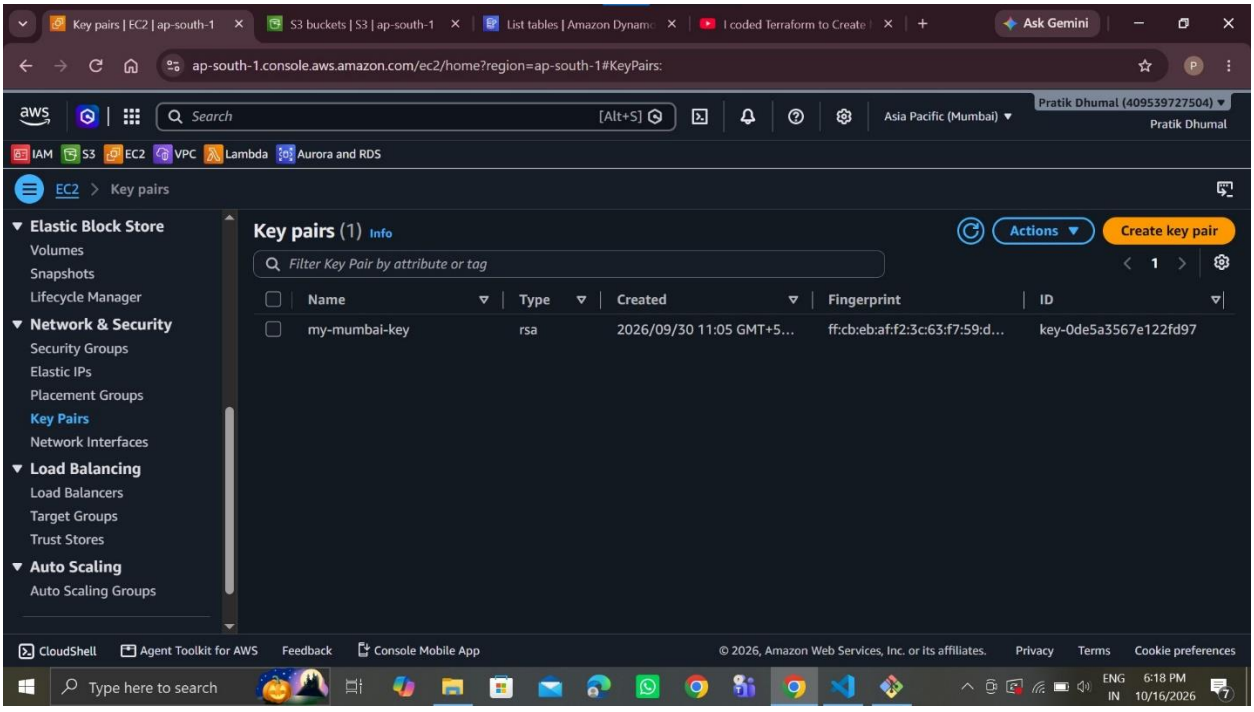

All ec2 instances successfully terminated

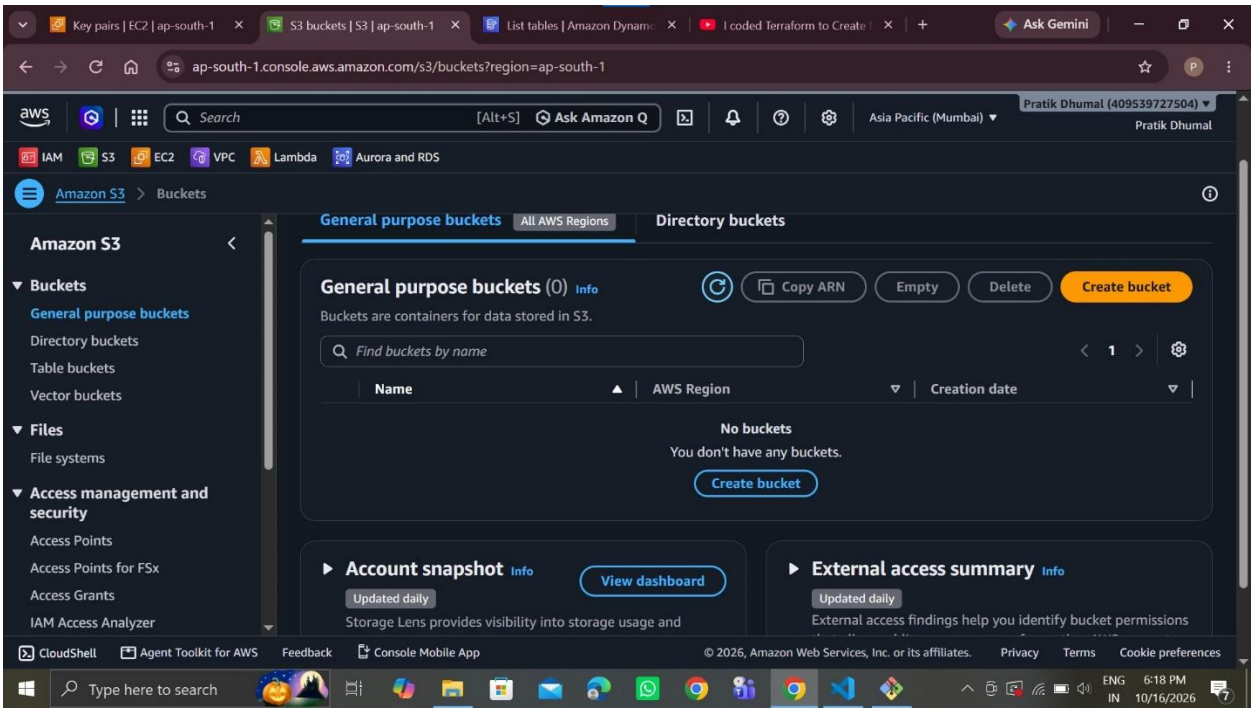

Security group also deleted

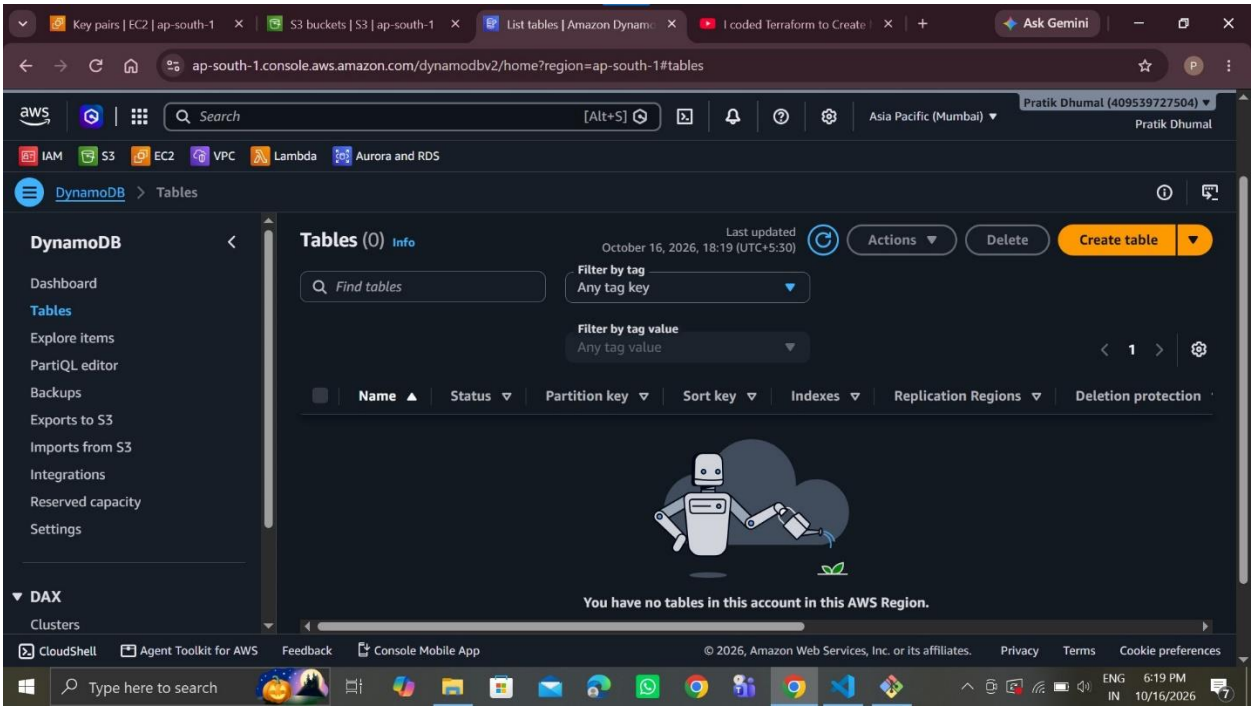

Key pair also deleted

All s3 bucket deleted

All DynamoDB tables deleted

<u>Terraform through this AWS infrastructure successfully automate</u>
